

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 3:- In Data Pane Which is Located In Left Side , Pane. Right-click anywhere in the blank space of the pane and select Create Calculated Field

Step 4:- Calculation Windows Will pop Up, Clear The Default Name and Name The Field Profit Margin Ratio

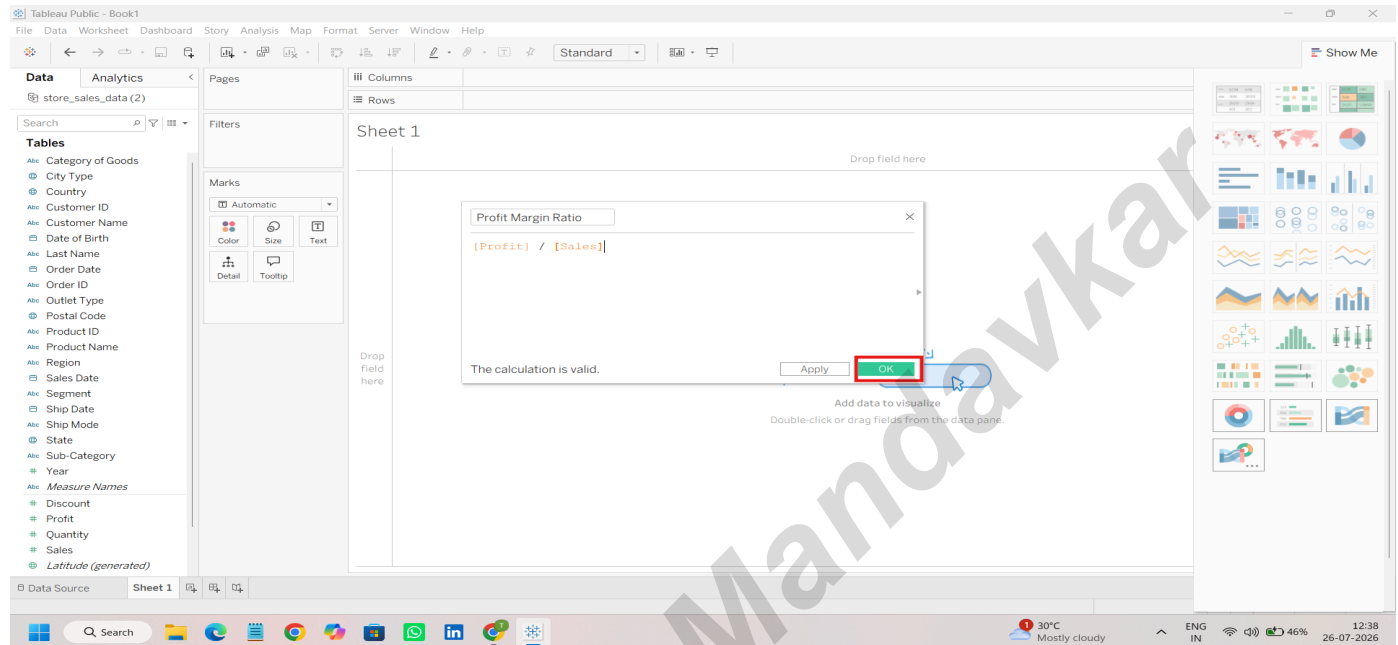

Name:- Chetan Mandavkar

Roll No. T093

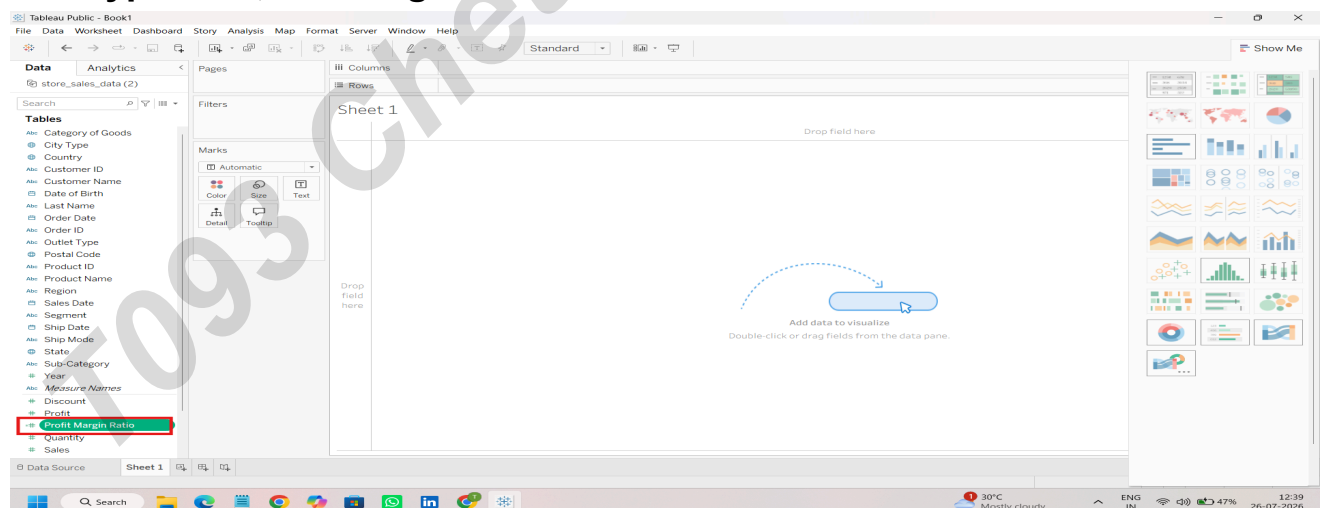

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 5:- In the main workspace box, enter the following basic mathematical formula: $[\text{Profit}] / [\text{Sales}]$. Look at the bottom-left corner of the editor box. It should say "The calculation is valid." Click OK.

Step 6:- Notice that your new custom field Profit Margin Ratio now appears in your Data Pane list with a small equal sign (=) next to its data type icon, showing it is a calculated field.

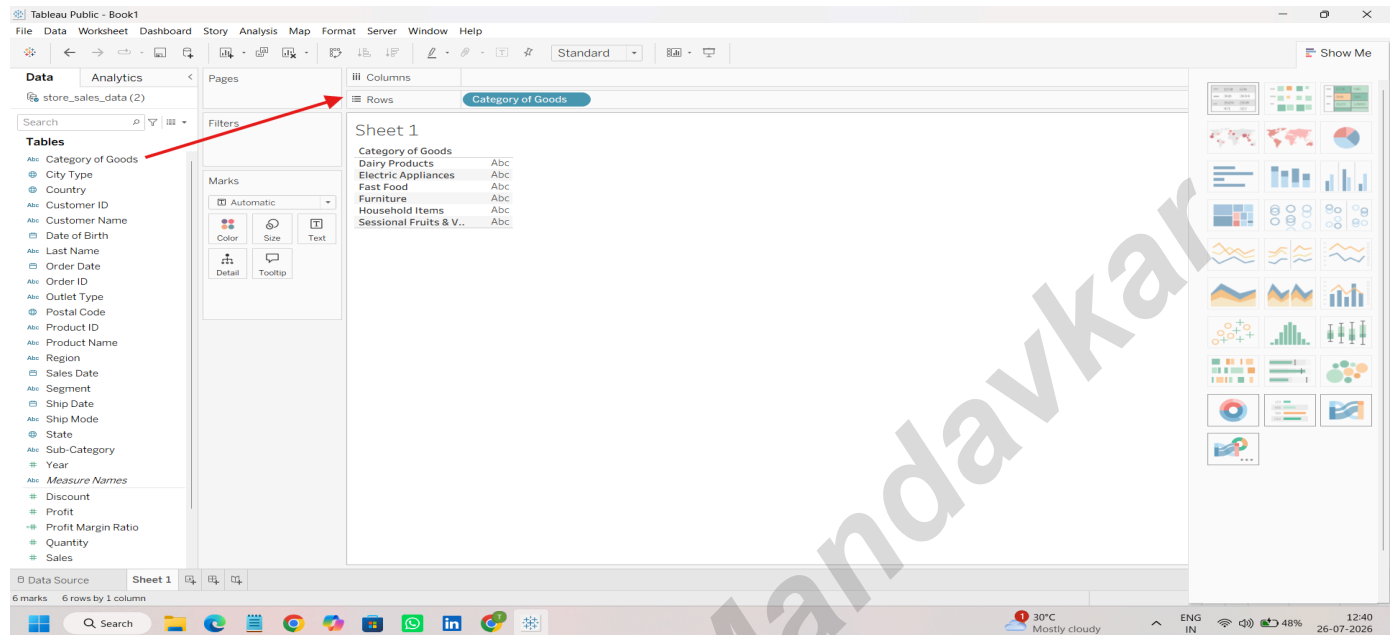

Name:- Chetan Mandavkar

Roll No. T093

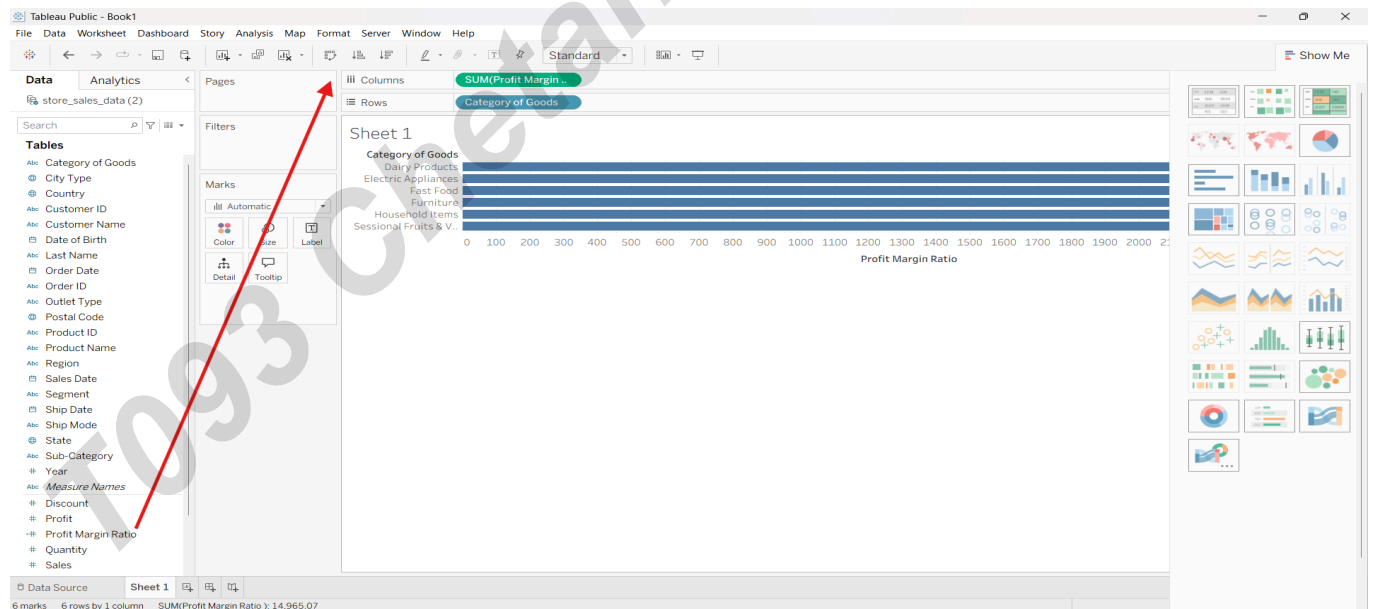

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 7:- Drag the Category of Goods dimension from your Data Pane and drop it onto the Rows shelf.

Step 8:- Drag your newly created Profit Margin Ratio calculated field and drop it onto the Columns shelf.

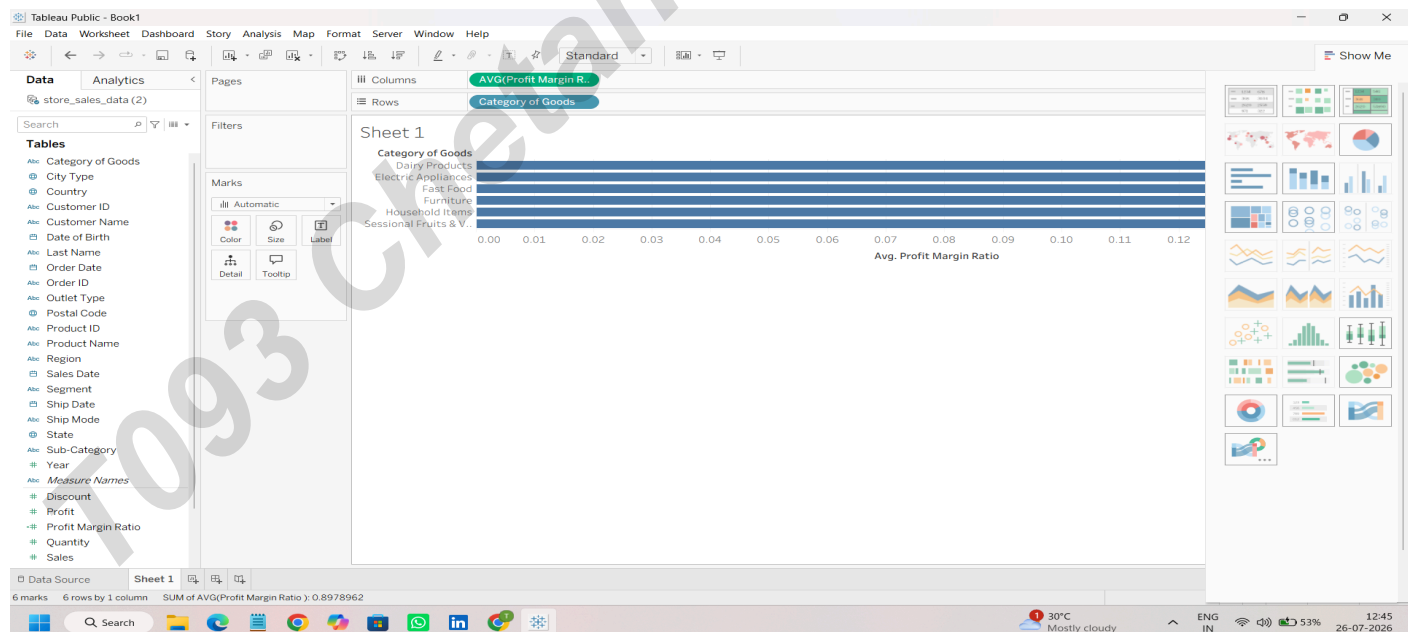

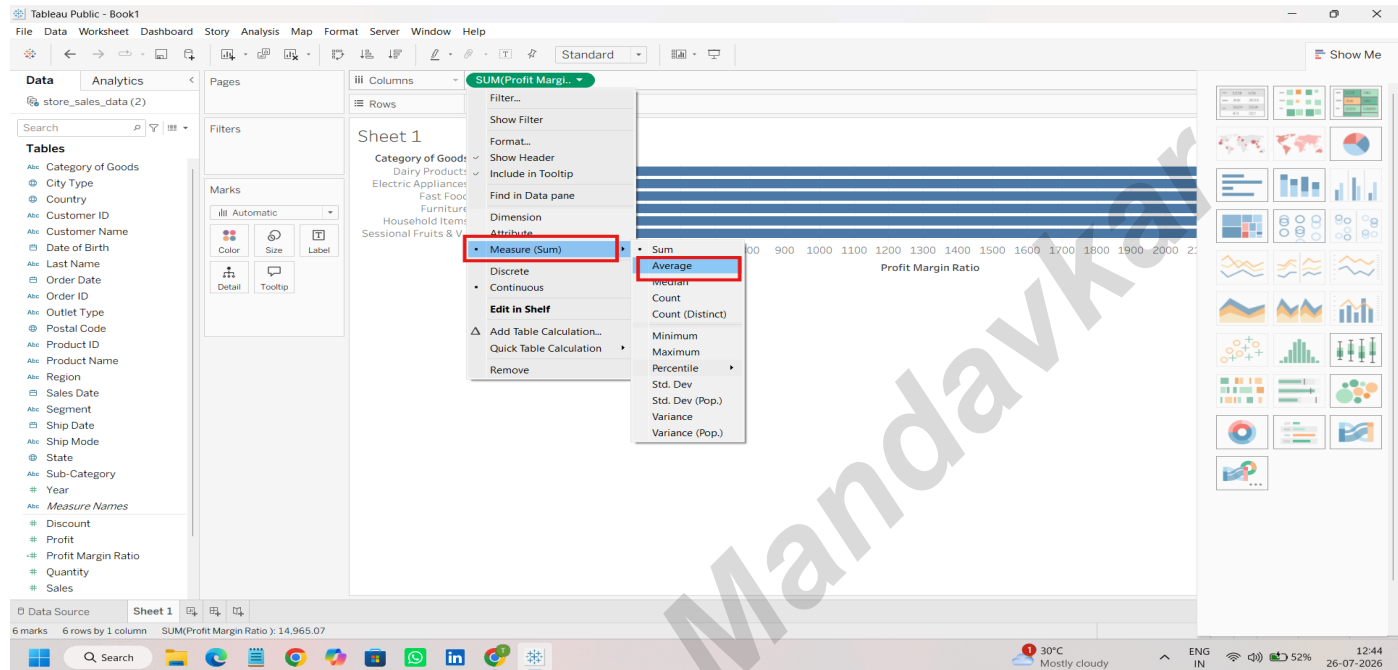

Name:- Chetan Mandavkar

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 9:- Right-click the Profit Margin Ratio pill now sitting on the Columns shelf, hover over Measure (Sum), and change it to Average to see the true margin distribution across product types.

Name:- Chetan Mandavkar

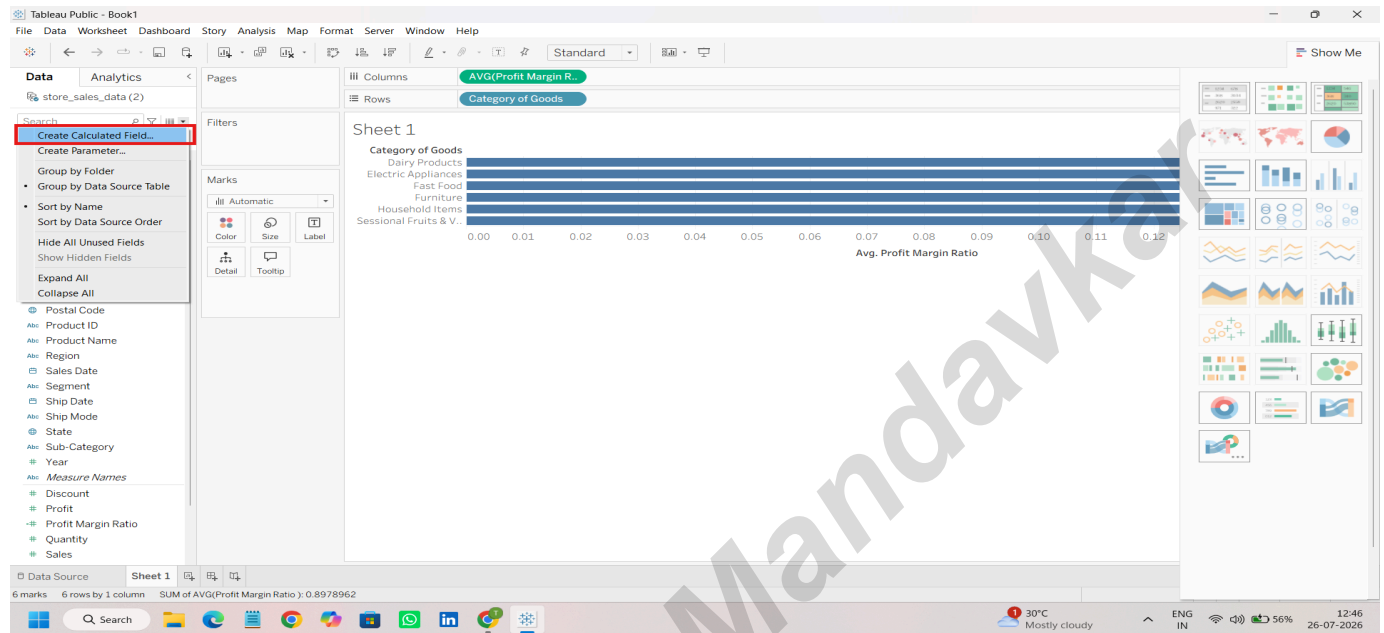

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

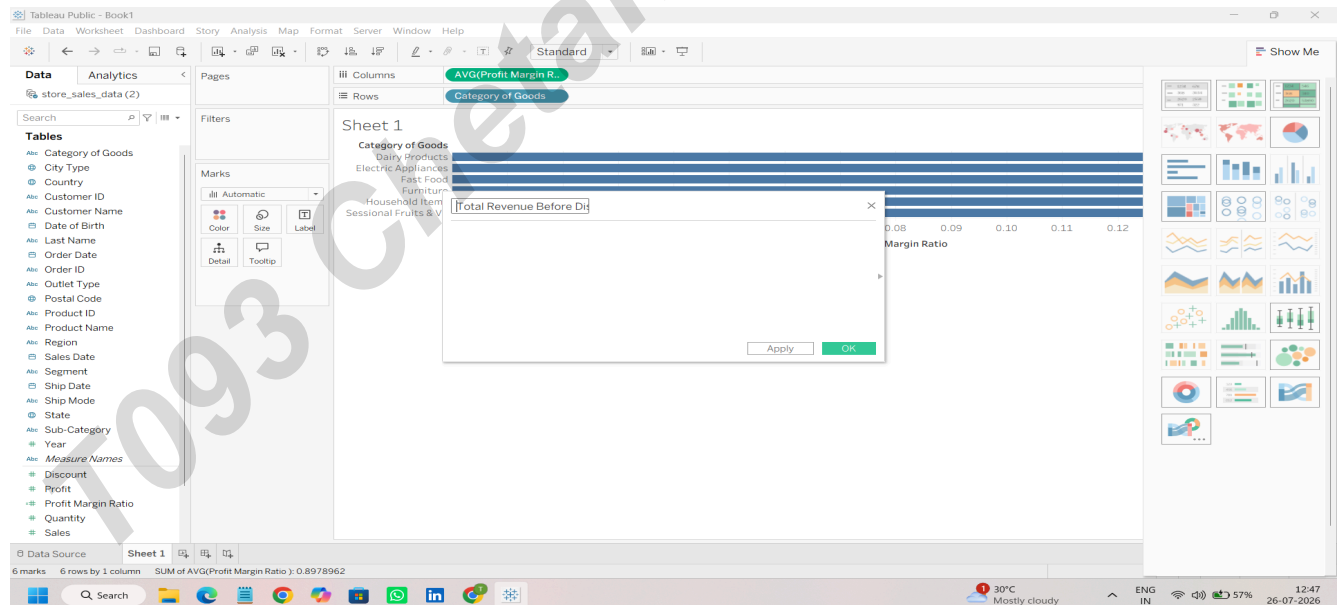

Sheth L.U.J. And Sir M.V. College

B) Perform row-level calculations

Step 1:- Right-click anywhere in the blank white space of your Data Pane and choose Create Calculated Field...

Step 2:- Name the field: Total Revenue Before Discount.

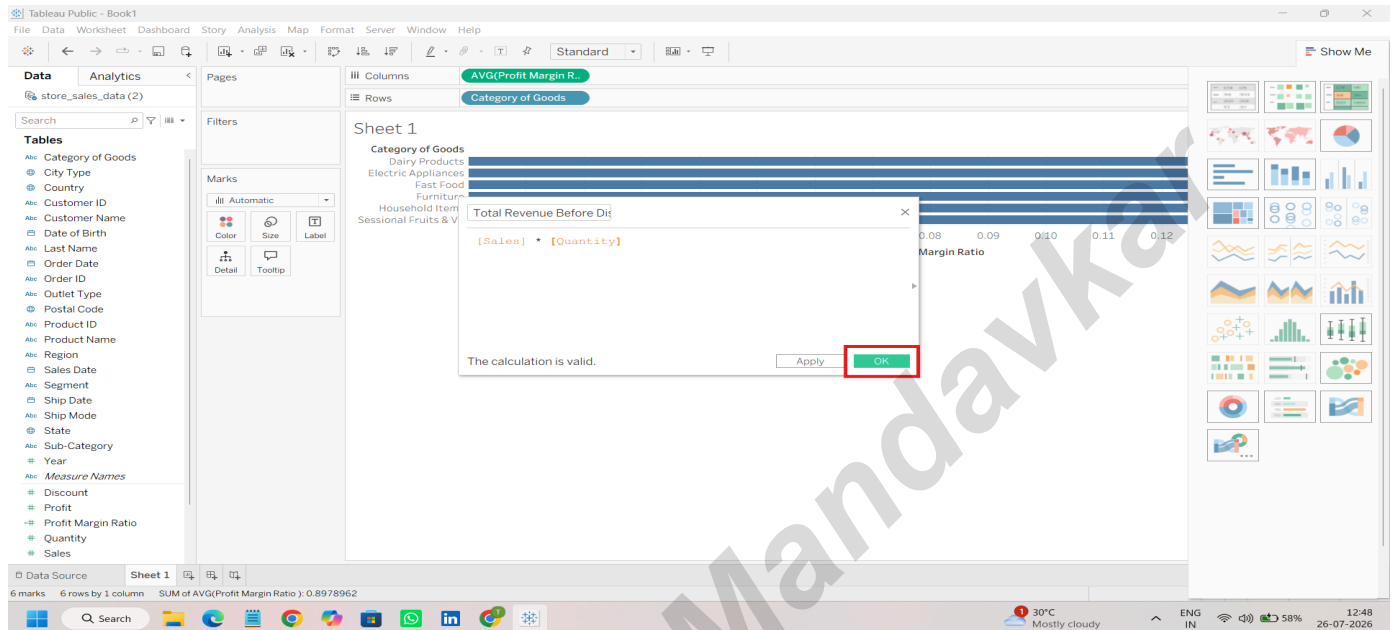

Name:- Chetan Mandavkar

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 3:- In the calculation formula canvas area, input the following expression: [Sales] * [Quantity] Verify the message at the bottom reads "The calculation is valid" and click OK.

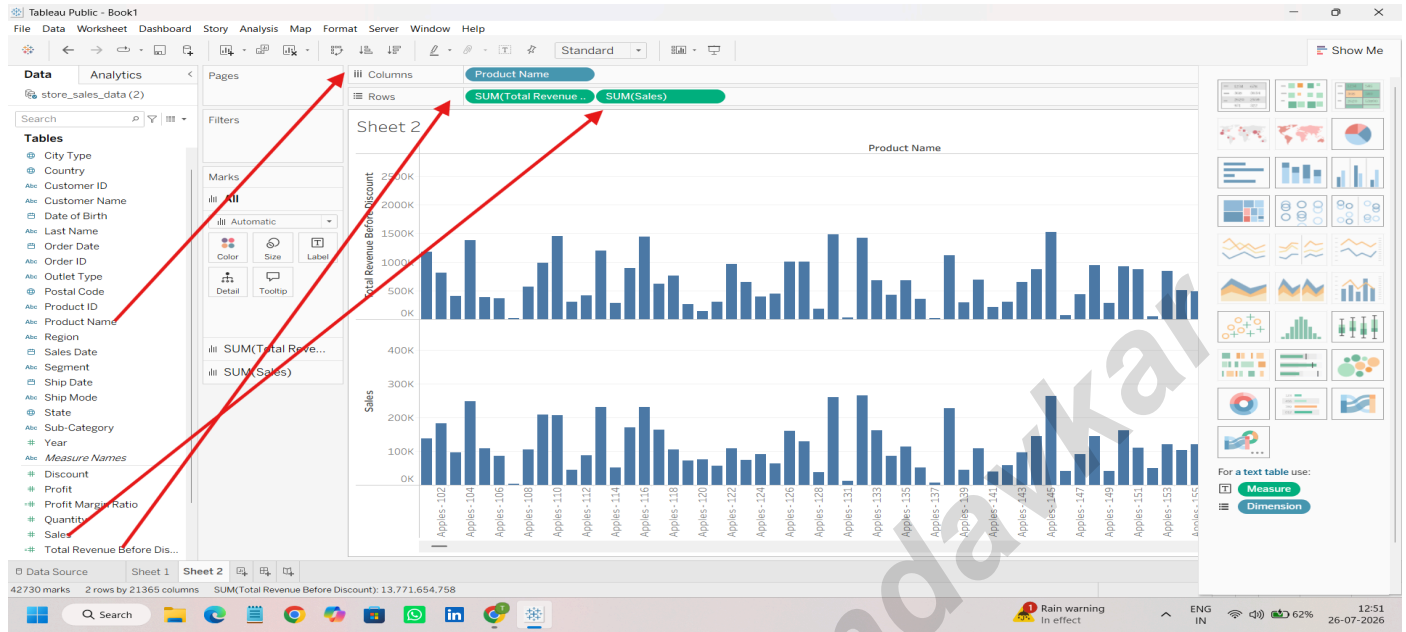

Step 4:-Click On Sheet 2 And Drag the Product Name dimension from the Data Pane and drop it into the Rows shelf. Drag your newly created Total Revenue Before Discount calculated field and drop it onto the Columns shelf. Drag the raw Sales measure pill and drop it directly onto the Columns shelf right next to the previous calculated pill to visually compare the two numbers.

Name:- Chetan Mandavkar

Roll No. T093

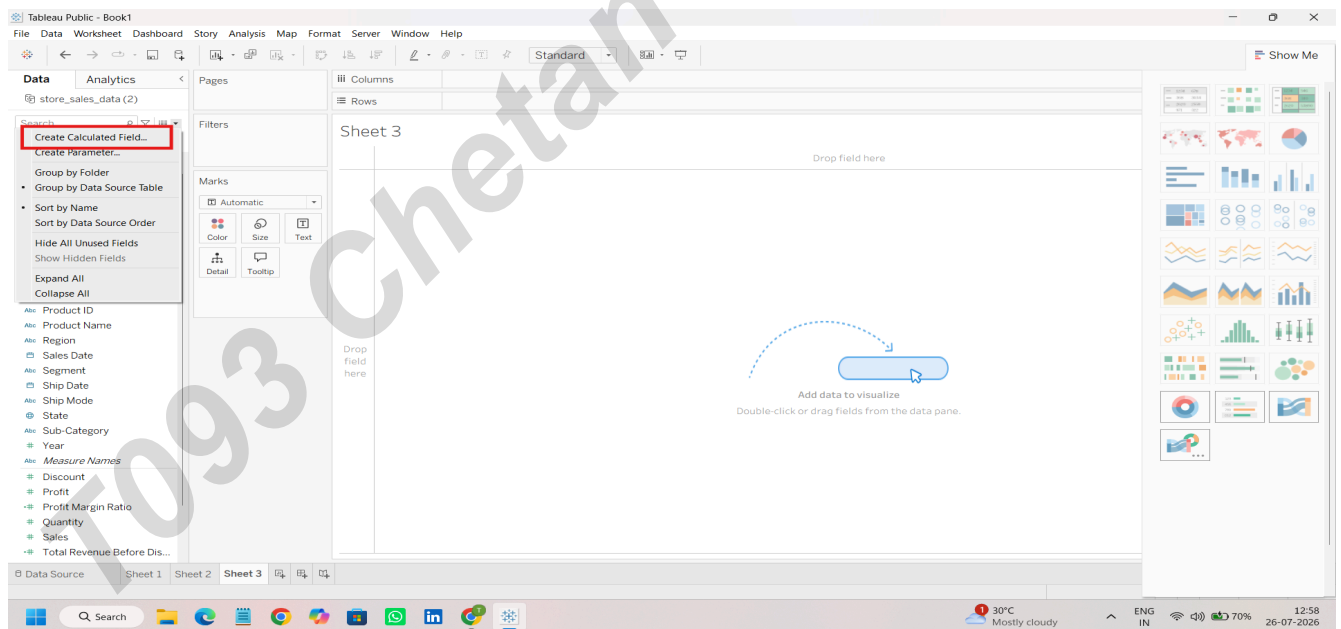

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

C) Perform aggregate-level calculations

Step 1:- Click On New Worksheet And Right-click in the blank white space of your Data Pane and select Create Calculated Field...

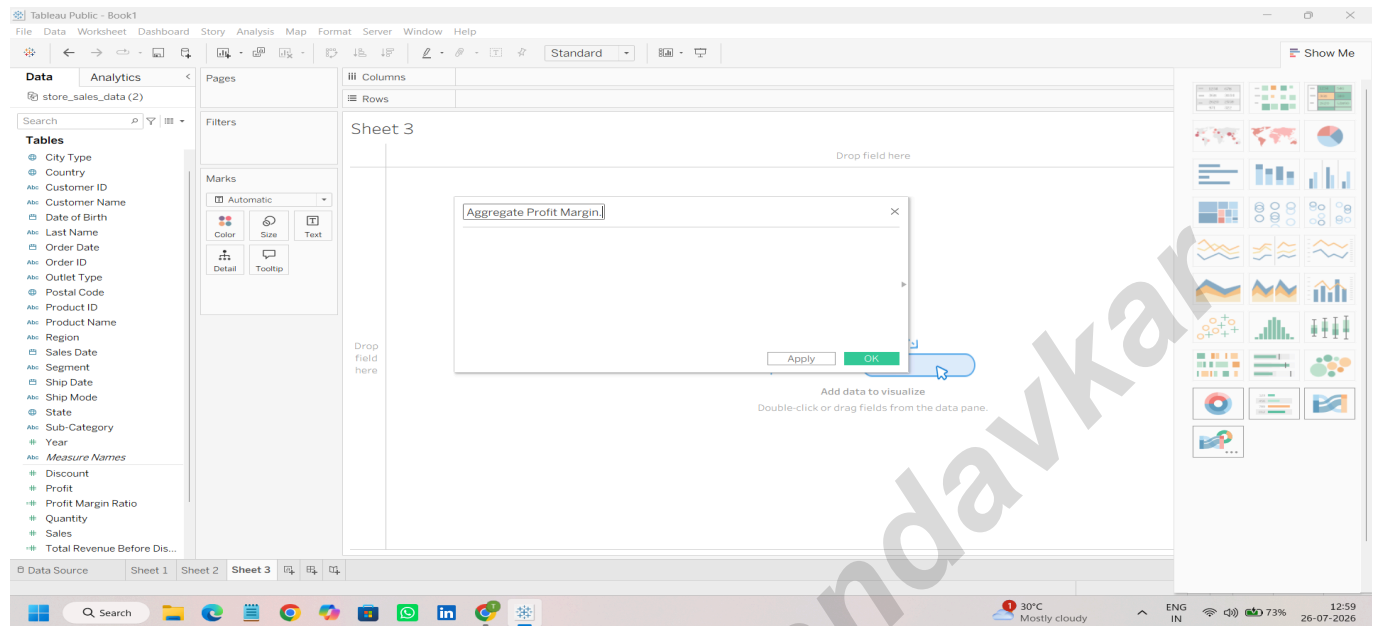

Name:- Chetan Mandavkar

Roll No. T093

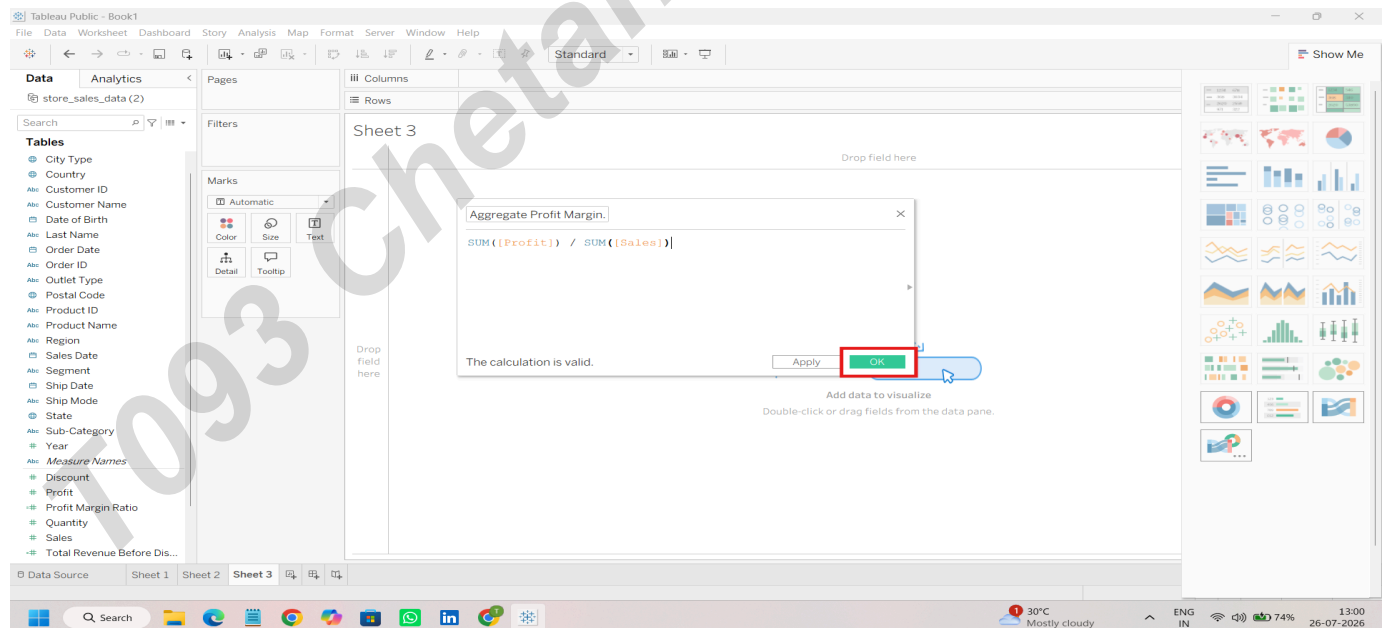

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 2:- Name the field: Aggregate Profit Margin.

Step 3:- In the calculation formula window, type the following expression: $SUM([Profit]) / SUM([Sales])$ and Look at the bottom left to ensure it reads "The calculation is valid" and click OK.

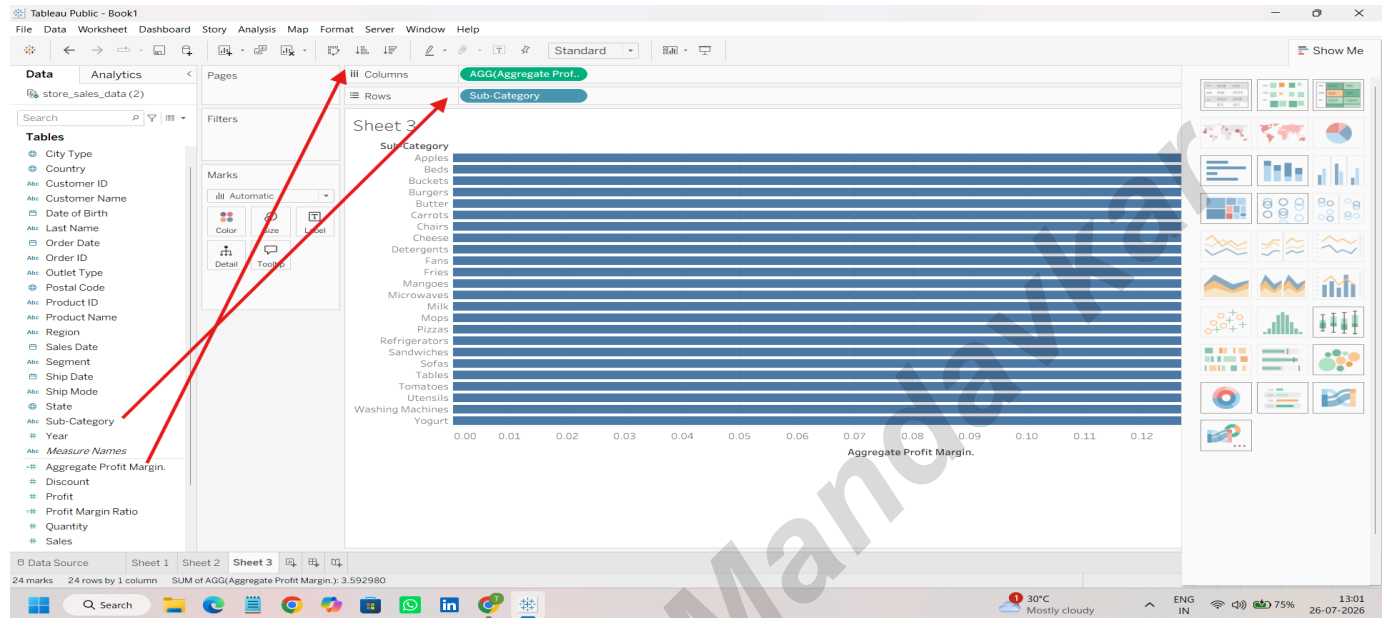

Name:- Chetan Mandavkar

Roll No. T093

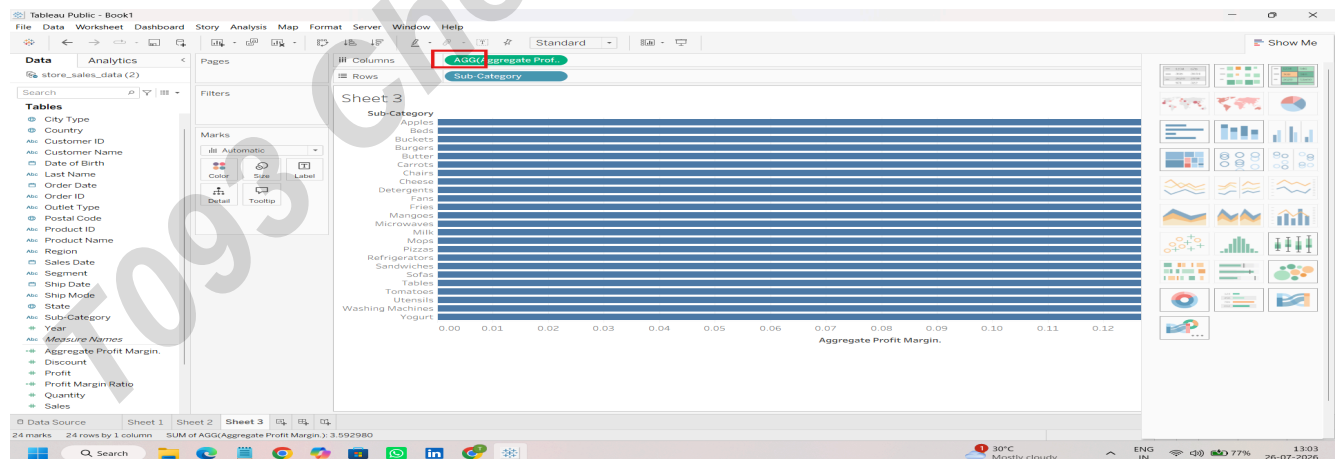

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 4:- Drag the Sub-Category dimension from the Data Pane and drop it onto the Rows shelf. Drag your newly created Aggregate Profit Margin calculated field and drop it onto the Columns shelf.

Step 5:- Look at the pill on the Columns shelf. It displays as AGG(Aggregate Profit Margin). Unlike standard fields, you cannot right-click this pill to change it to "Average" or "Count"—Tableau locks it as an aggregation because the math is already defined inside the formula.

Name:- Chetan Mandavkar

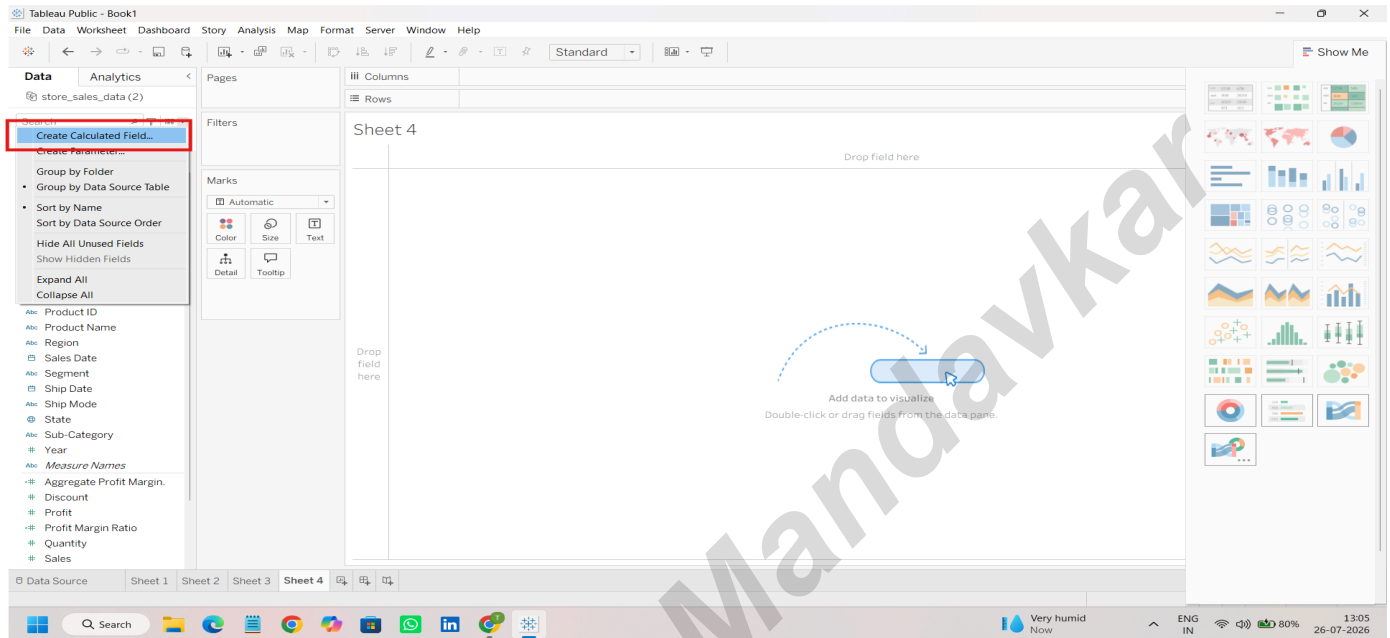

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

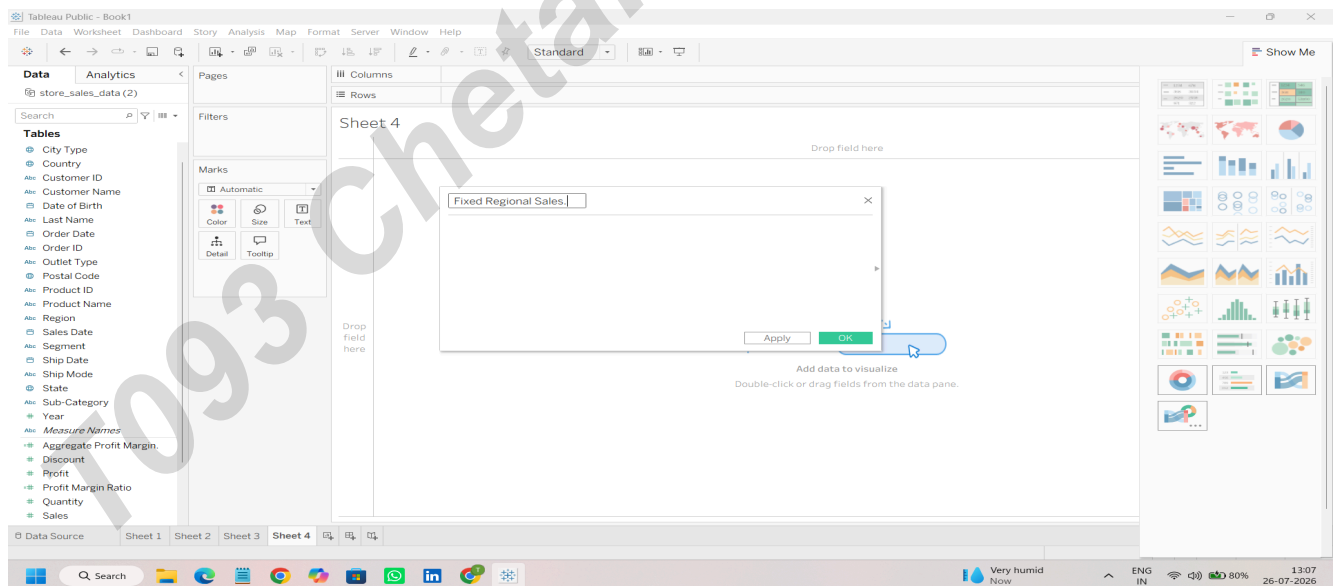

Sheth L.U.J. And Sir M.V. College

D) Implement FIXED Level of Detail (LOD) calculations

Step 1:- Right-click in the blank white space of your Data Pane or Click the Small Triangle Icon next to search bar and select Create Calculated Field...

Step 2:- Name the field: Fixed Regional Sales.

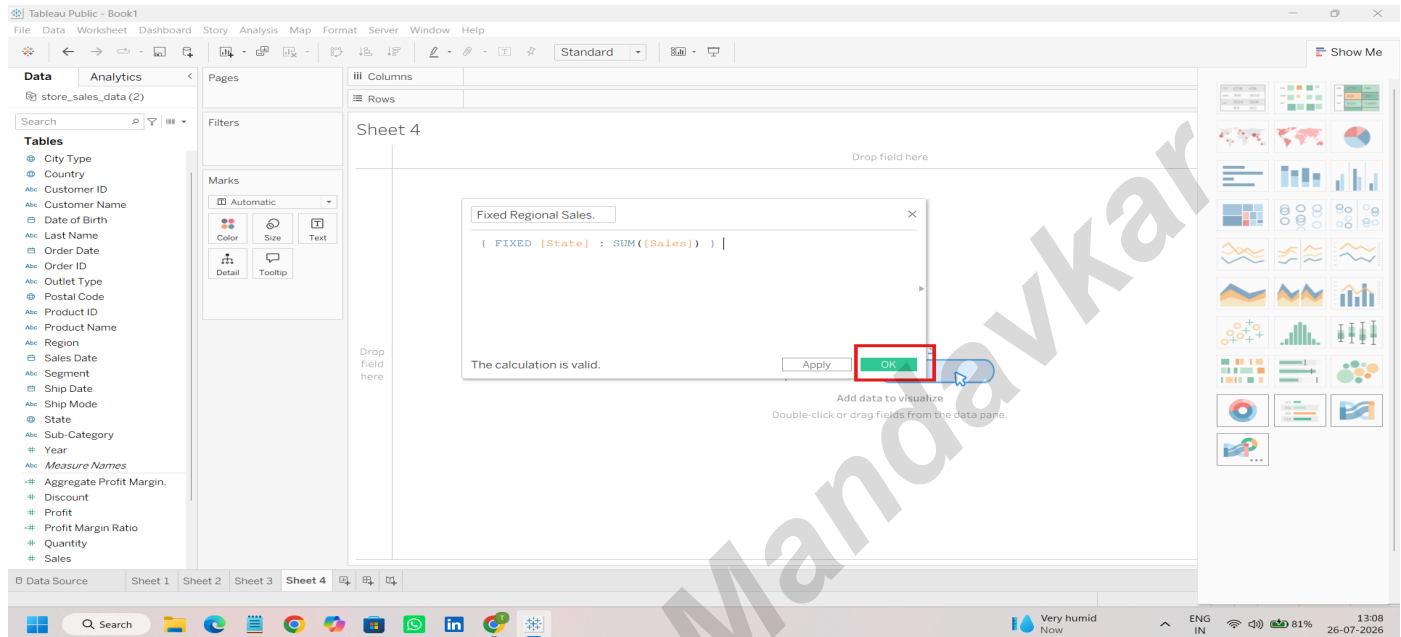

Name:- Chetan Mandavkar

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 3:- In the calculation formula window, type the following expression using curly braces {}: { FIXED [State] : SUM([Sales]) } Look at the bottom left to ensure it reads "The calculation is valid" and click OK.

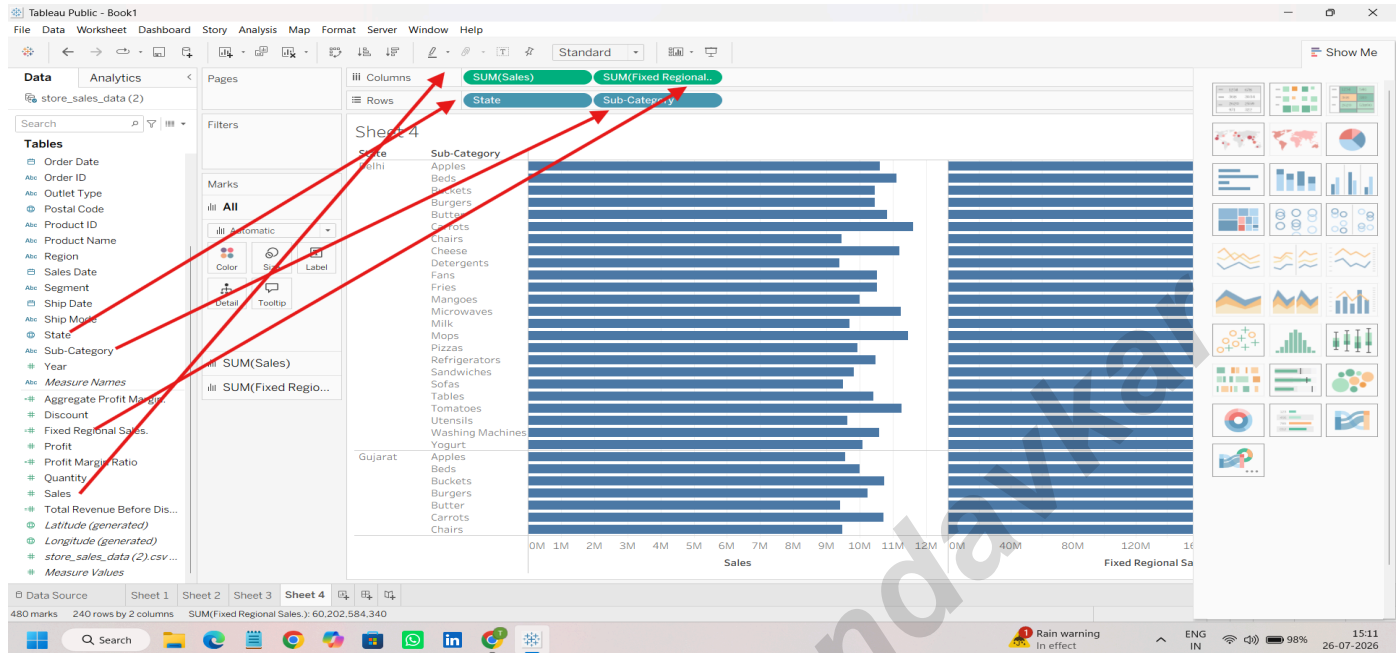

Step 4:- Drag the State dimension from the Data Pane and drop it onto the Rows shelf. Drag the Sub-Category dimension and drop it onto the Rows shelf, right next to State. Drag the raw Sales measure pill onto the Columns shelf. (This shows the sales split down by each sub-category within that state). Drag your newly created Fixed Regional Sales calculated field and drop it onto the Columns shelf, right next to the raw Sales pill.

Name:- Chetan Mandavkar

Roll No. T093

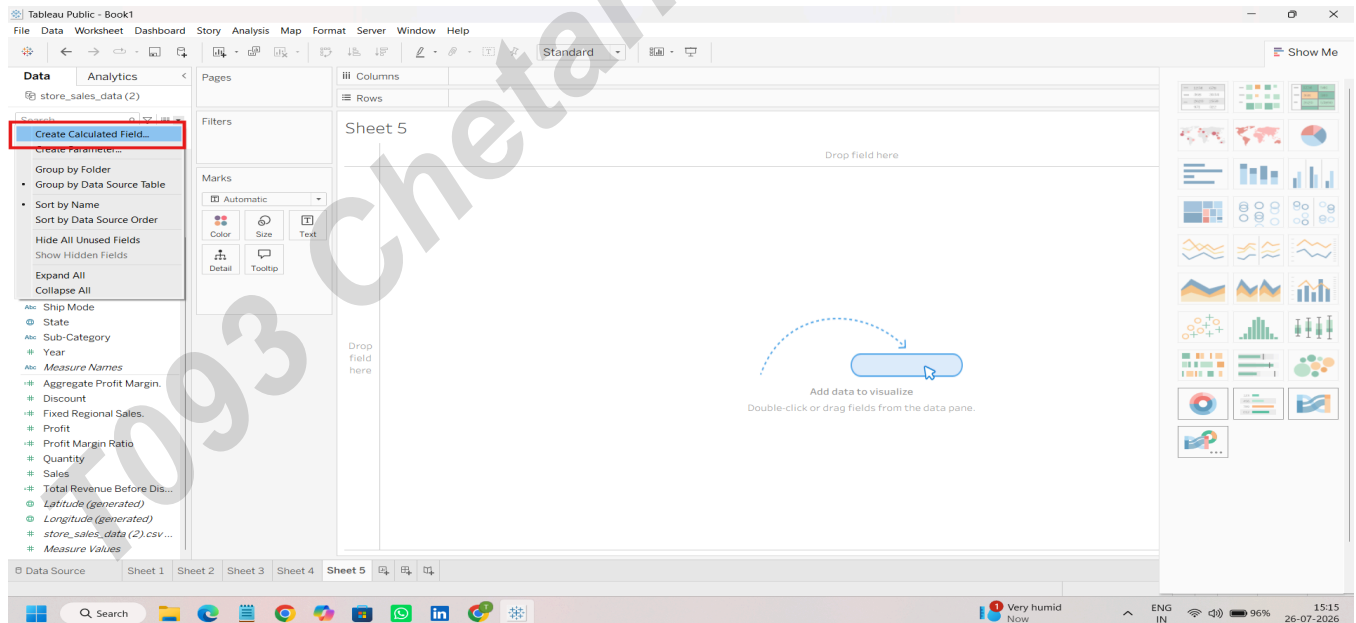

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

E) Use INCLUDE and EXCLUDE LOD expressions

Step 1:- Right-click in the blank white space of your Data Pane and select Create Calculated Field...

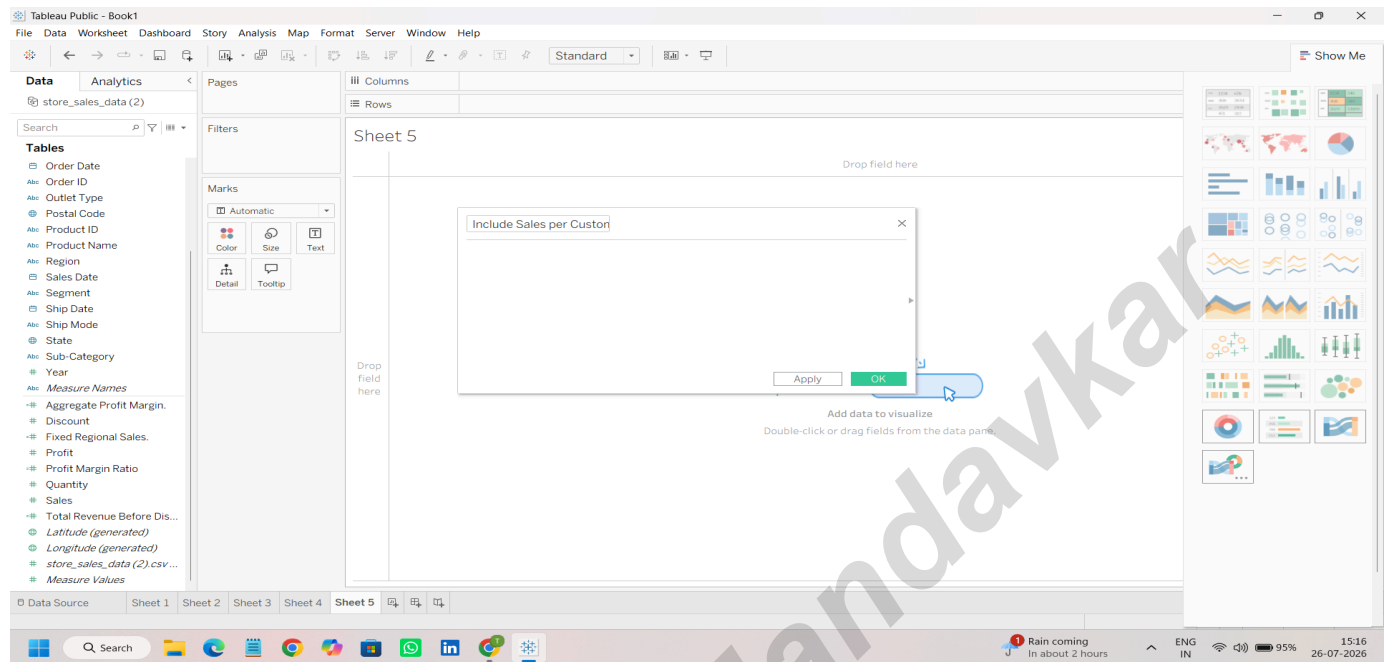

Name:- Chetan Mandavkar

Roll No. T093

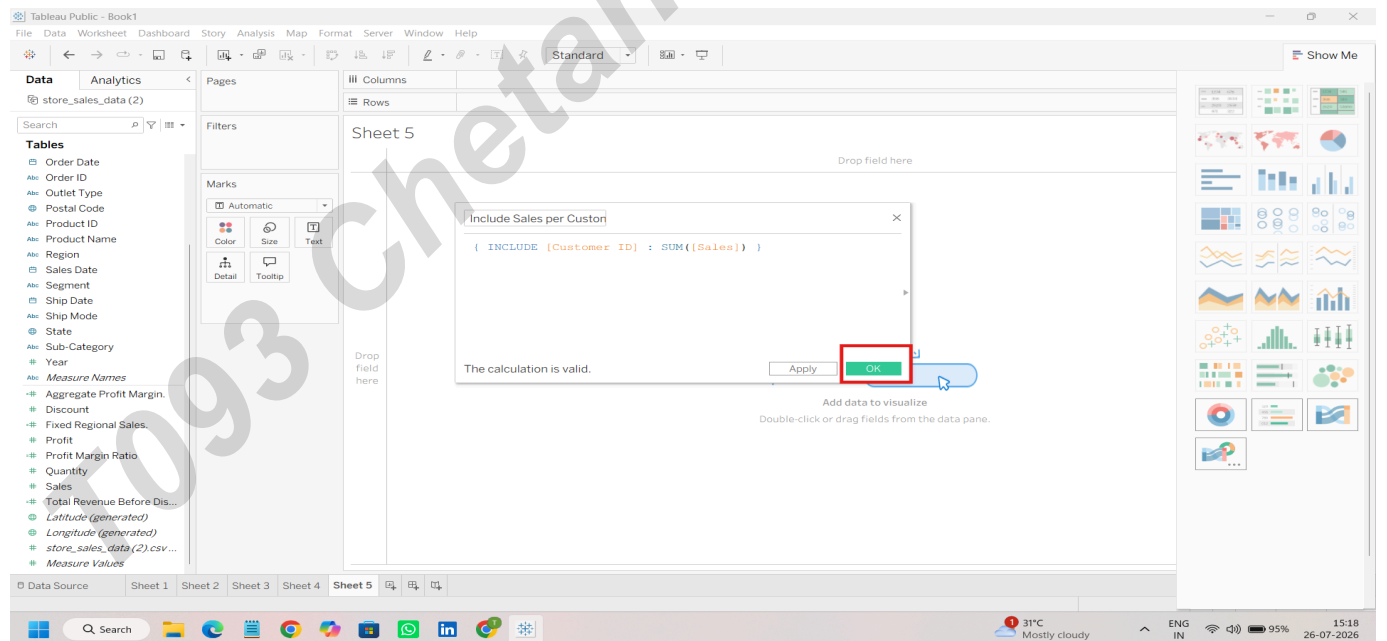

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 2:- Name the field: Include Sales per Customer.

Step 3:- In the calculation formula canvas area, input the following expression: { INCLUDE [Customer ID] : SUM([Sales]) } and Click OK

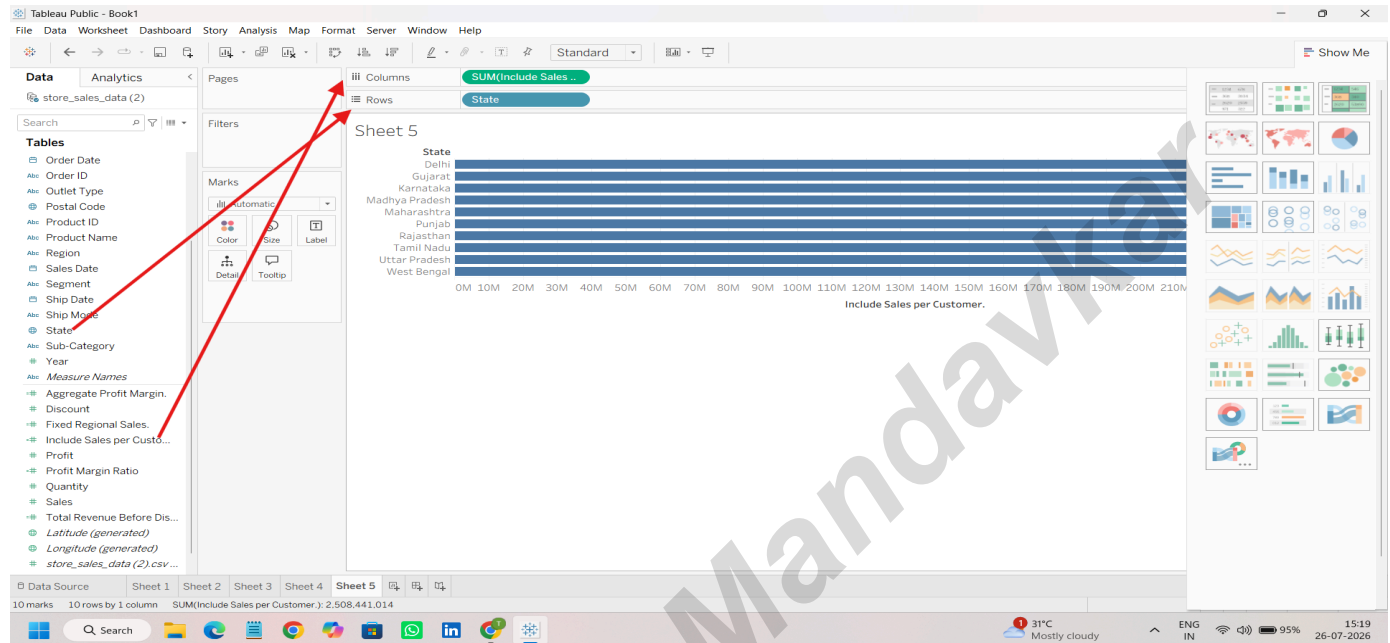

Name:- Chetan Mandavkar

Roll No. T093

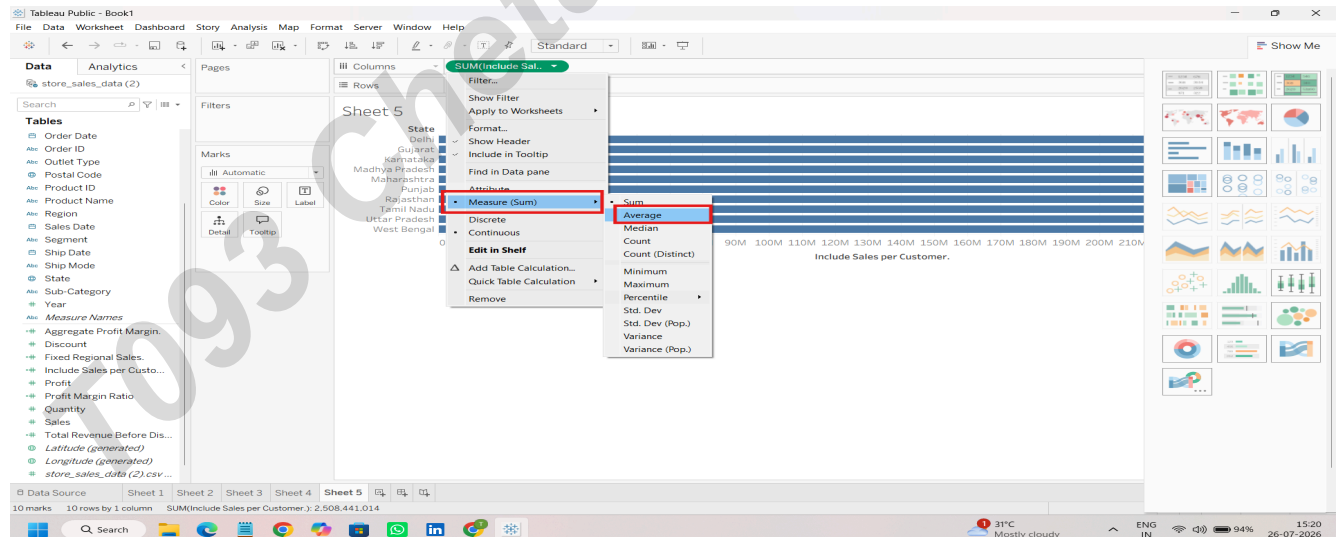

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 4:- Drag the State dimension from the Data Pane and drop it onto the Rows shelf. Drag your newly created Include Sales per Customer calculated field and drop it onto the Columns shelf.

Step 5:- Right-click the Include Sales per Customer pill on the Columns shelf, hover over Measure (Sum), and change it to Average.

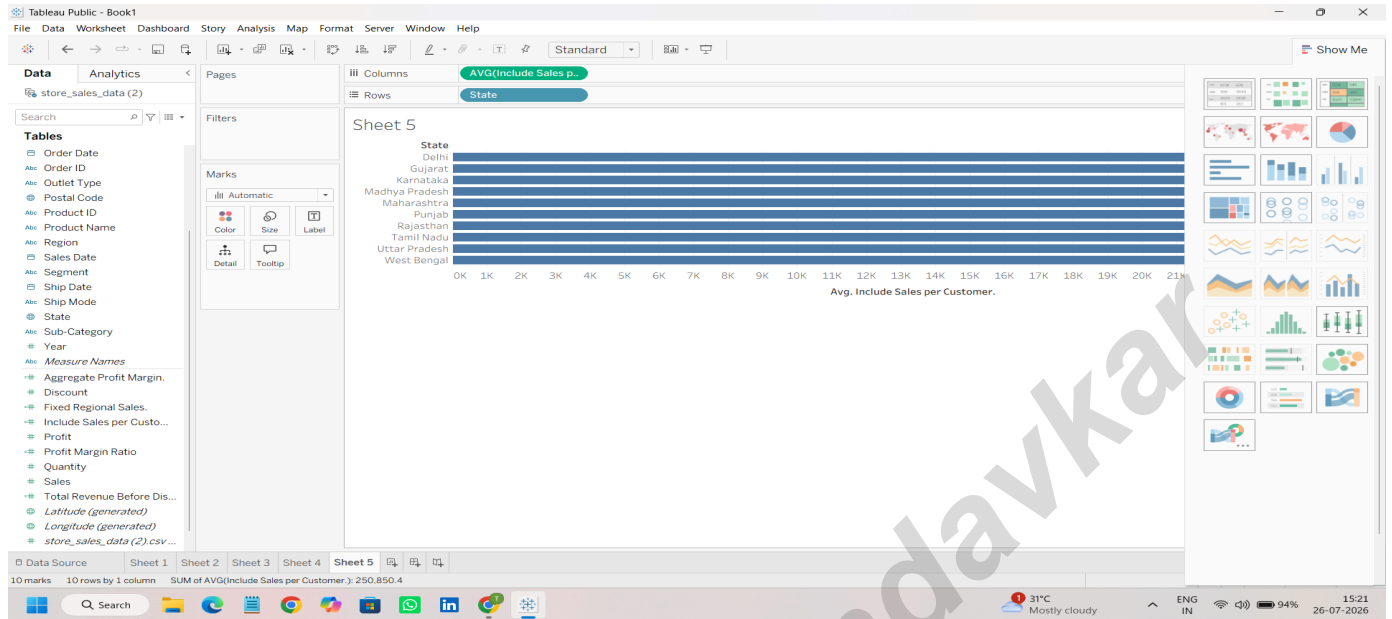

Name:- Chetan Mandavkar

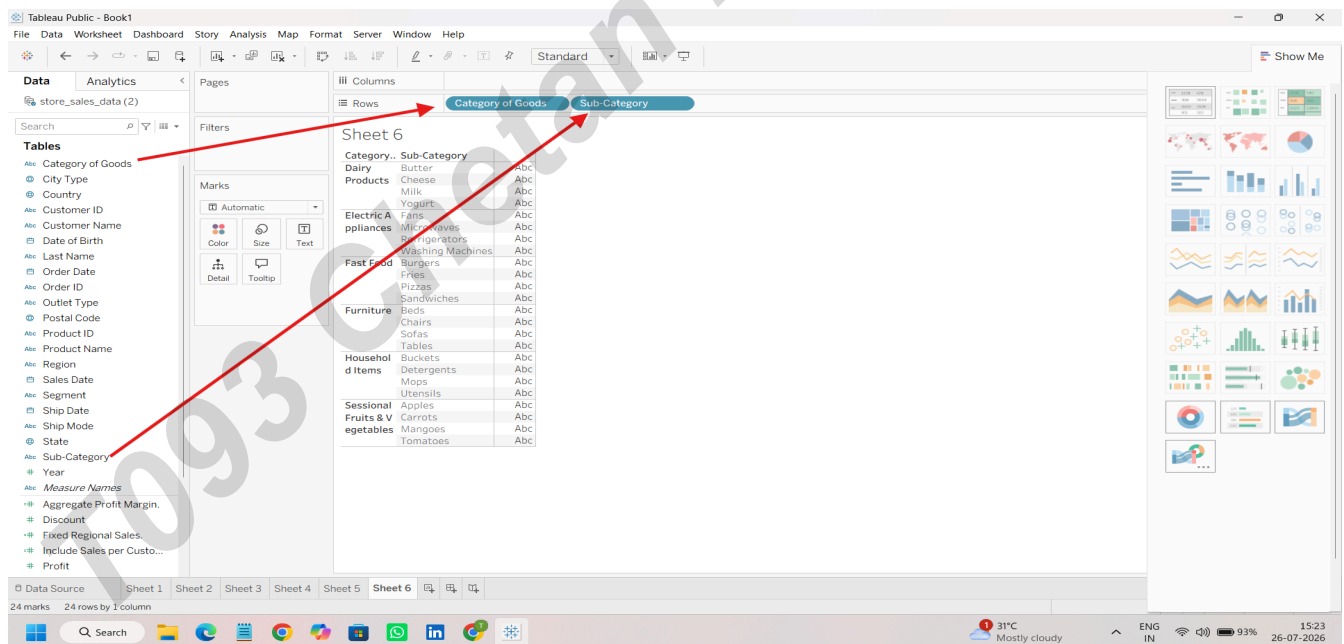

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 6:- Open a new blank worksheet. Drag Category of Goods onto the Rows shelf. Drag Sub-Category onto the Rows shelf (right next to Category of Goods).

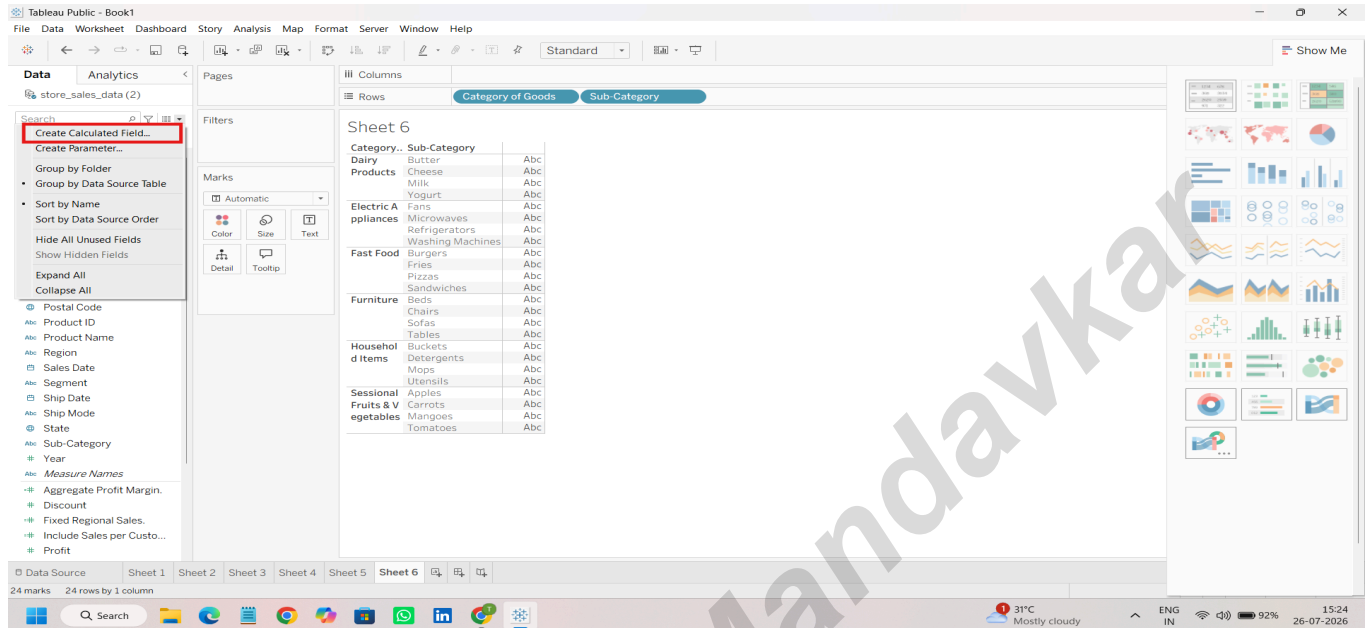

Name:- Chetan Mandavkar

Roll No. T093

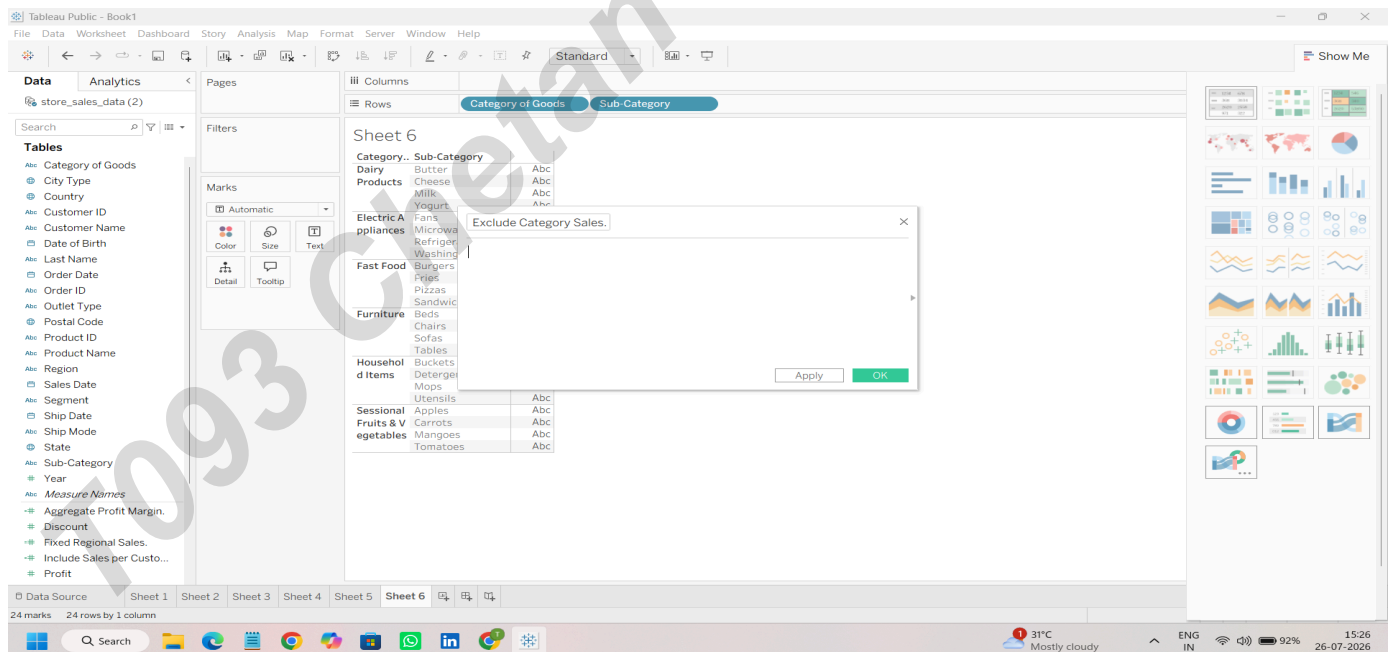

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 7:- Right-click in the blank white space of the Data Pane or Click the Small Triangle Icon next to search bar and select Create Calculated Field...

Step 8:- Name the field: Exclude Category Sales.

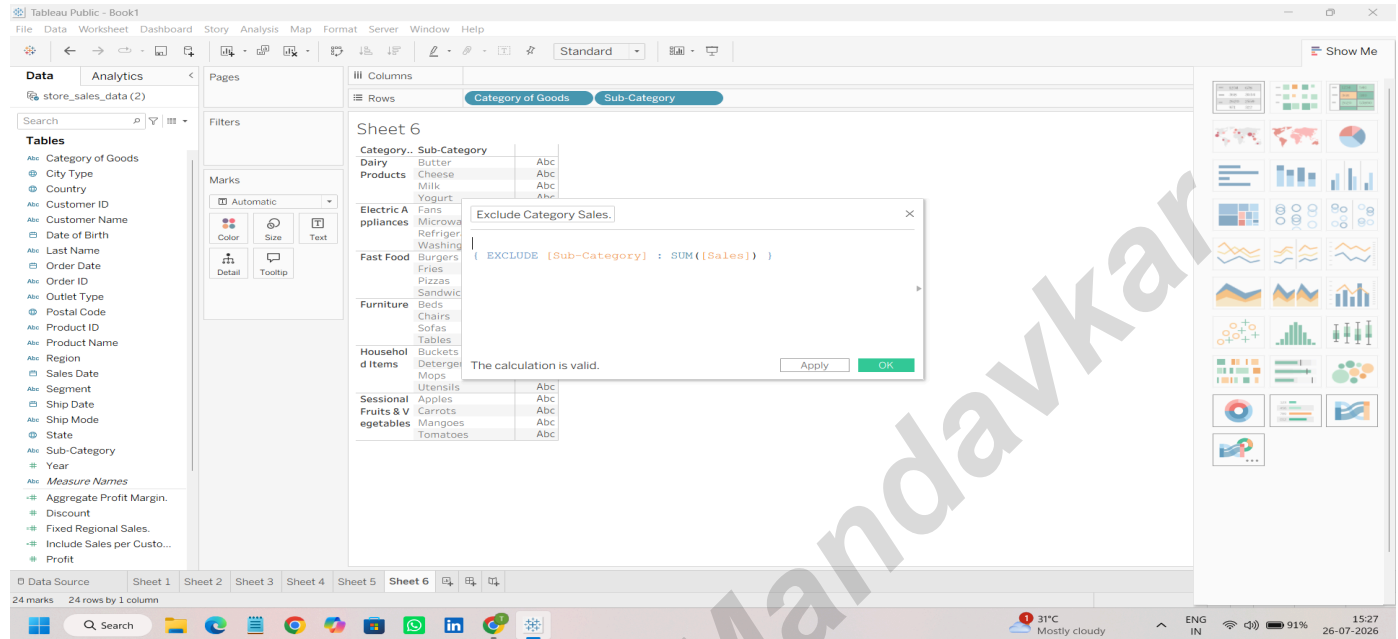

Name:- Chetan Mandavkar

Roll No. T093

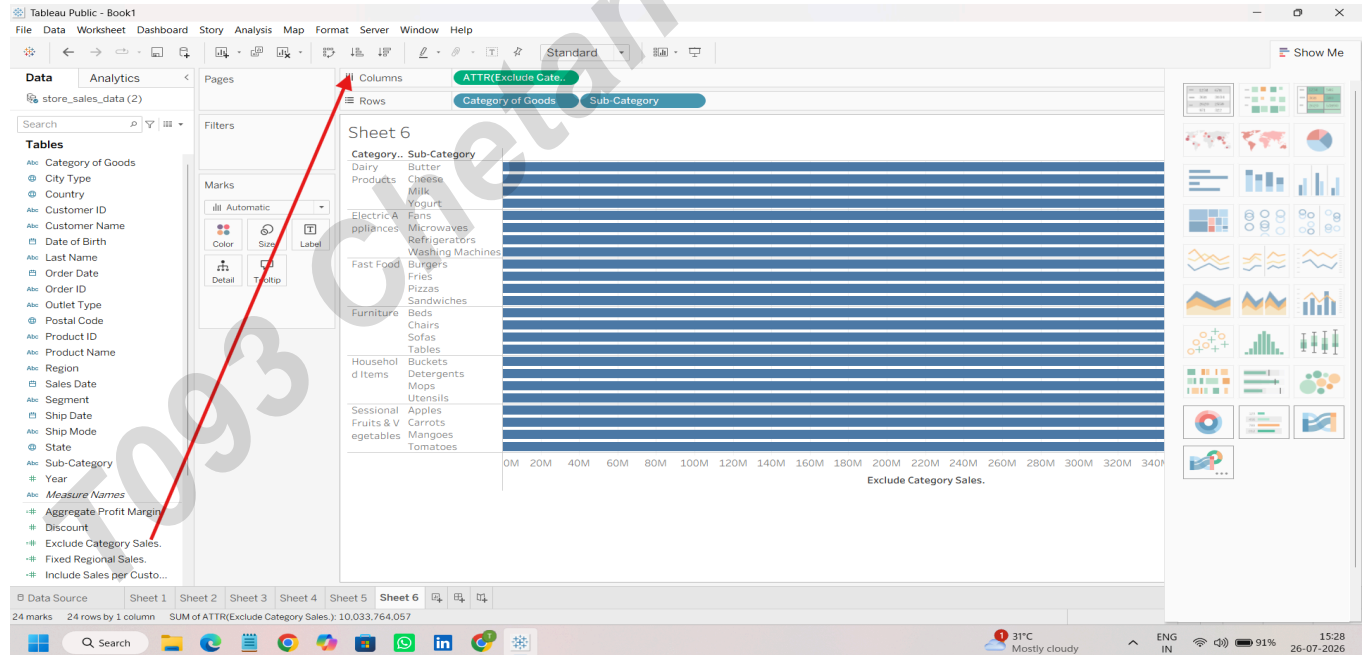

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 9:- Input the following expression: { EXCLUDE [Sub-Category] : SUM([Sales]) } And Click OK

Step 10:- Drag This New Field Into Columns Itself

Name:- Chetan Mandavkar

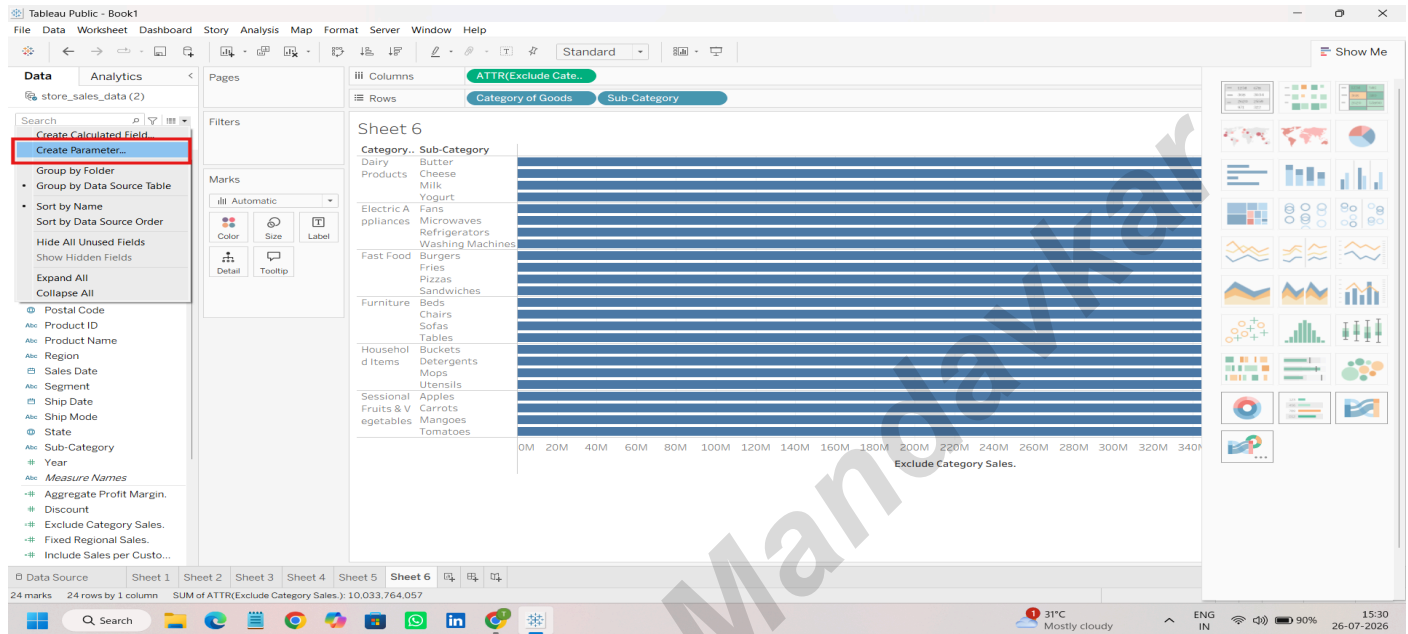

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

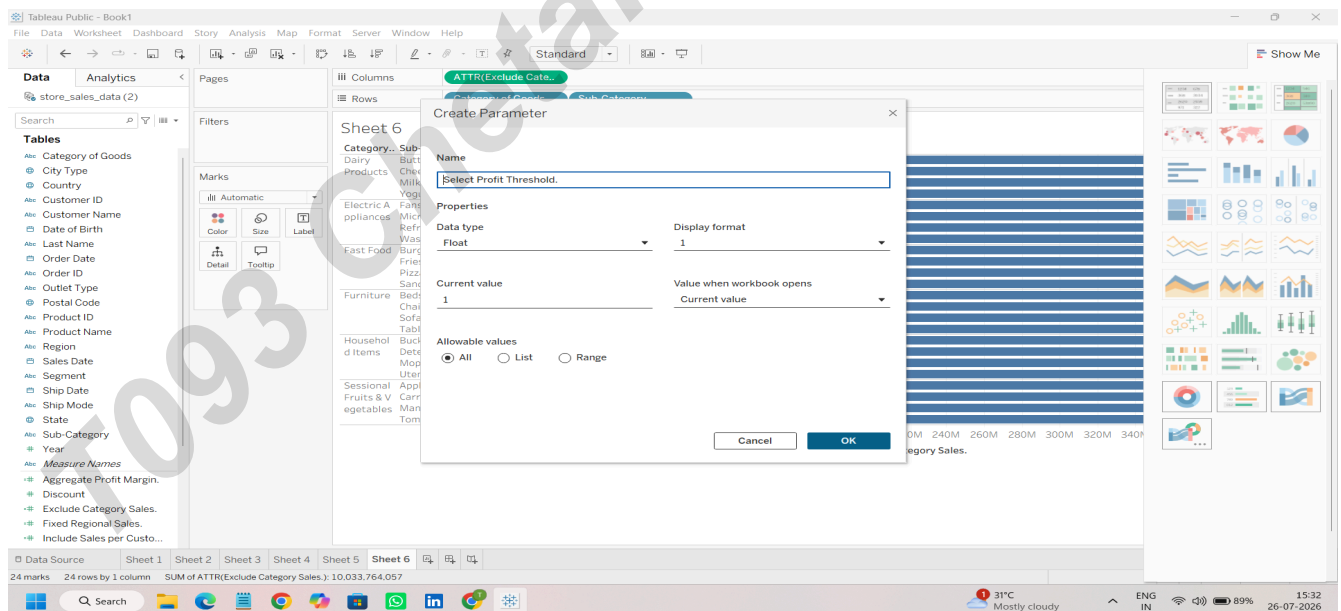

Sheth L.U.J. And Sir M.V. College

F) Create and use parameters for dynamic analysis

Step 1:- Go to your Data Pane. Click the small drop-down arrow (small triangle) next to the search bar at the top and choose Create Parameter.

Step 2:- Name the parameter: Select Profit Threshold.

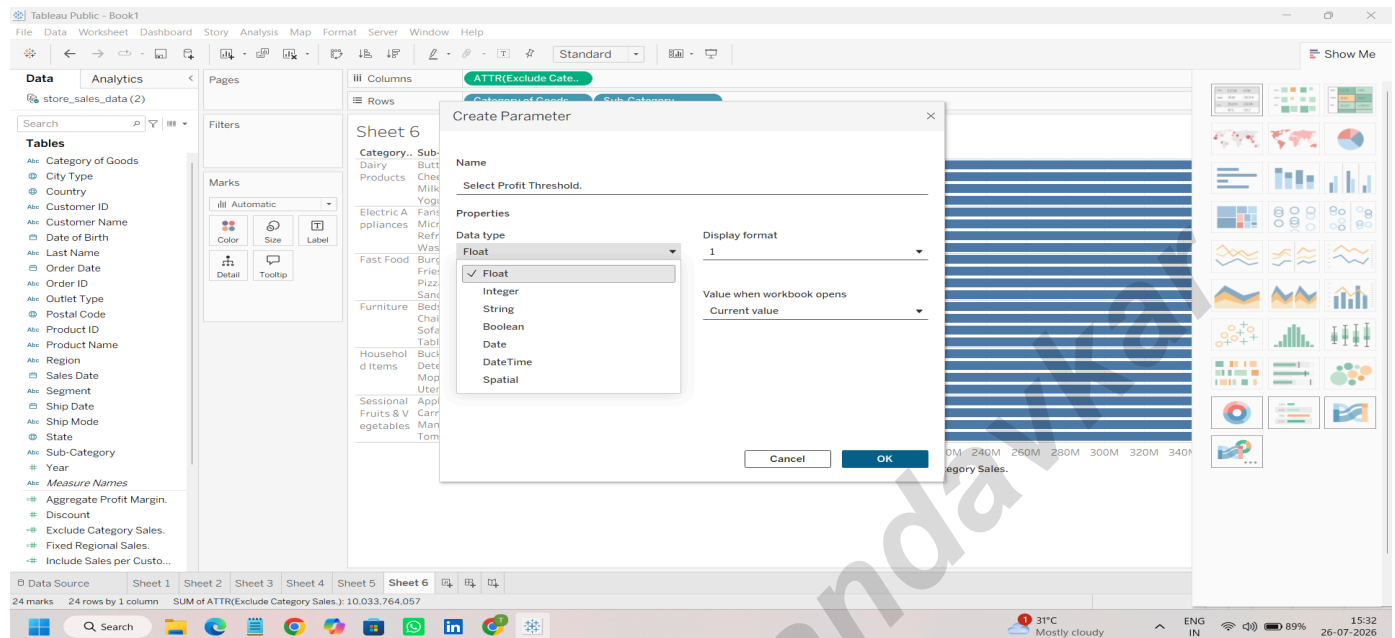

Name:- Chetan Mandavkar

Roll No. T093

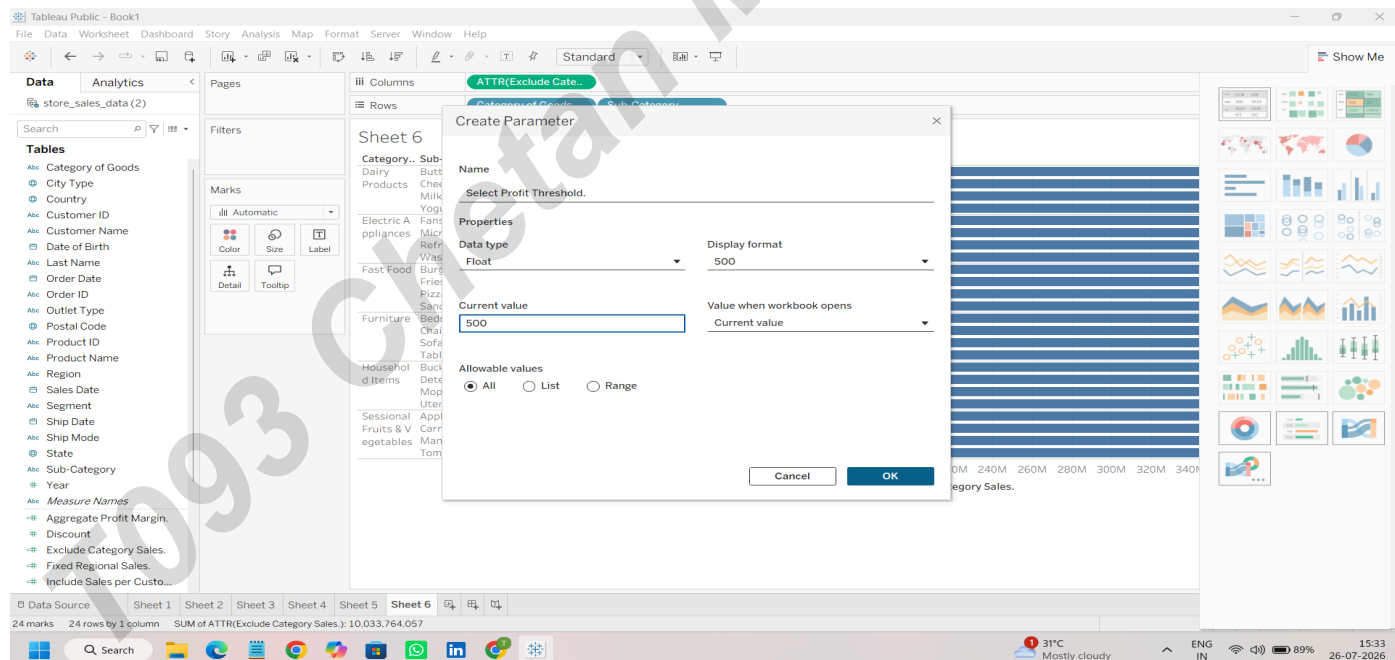

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 3:- Set the Data Type to Float (or Integer).

Step 4:- Set the Current Value to 500.

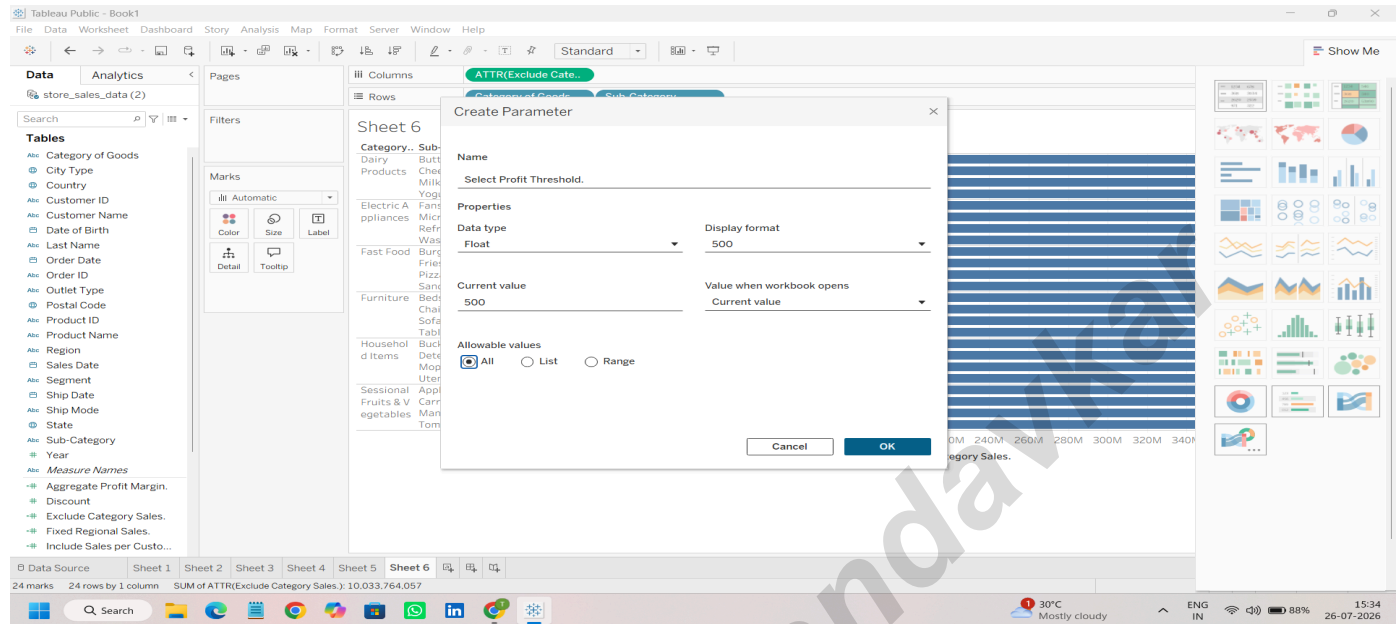

Name:- Chetan Mandavkar

Roll No. T093

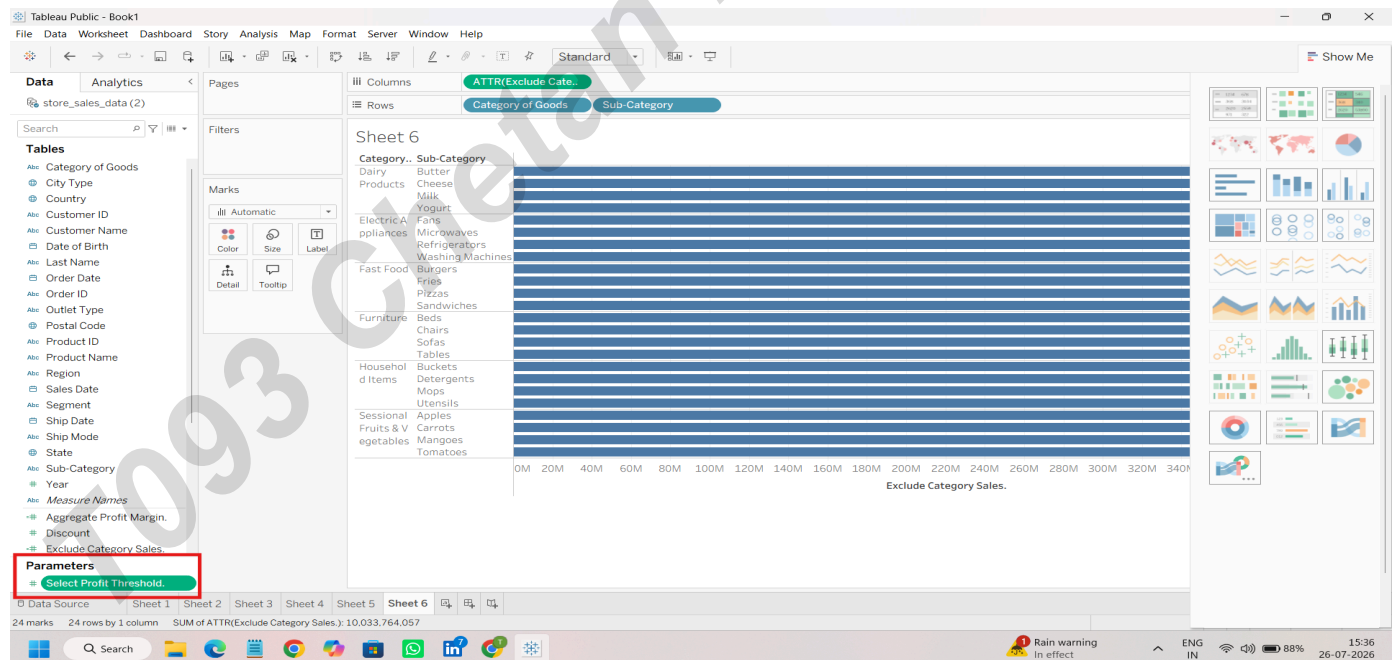

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 5:- Keep the Allowable values set to All and click OK.

Step 6:- Notice a new section titled Parameters appears at the bottom of your Data Pane, showcasing your new selector.

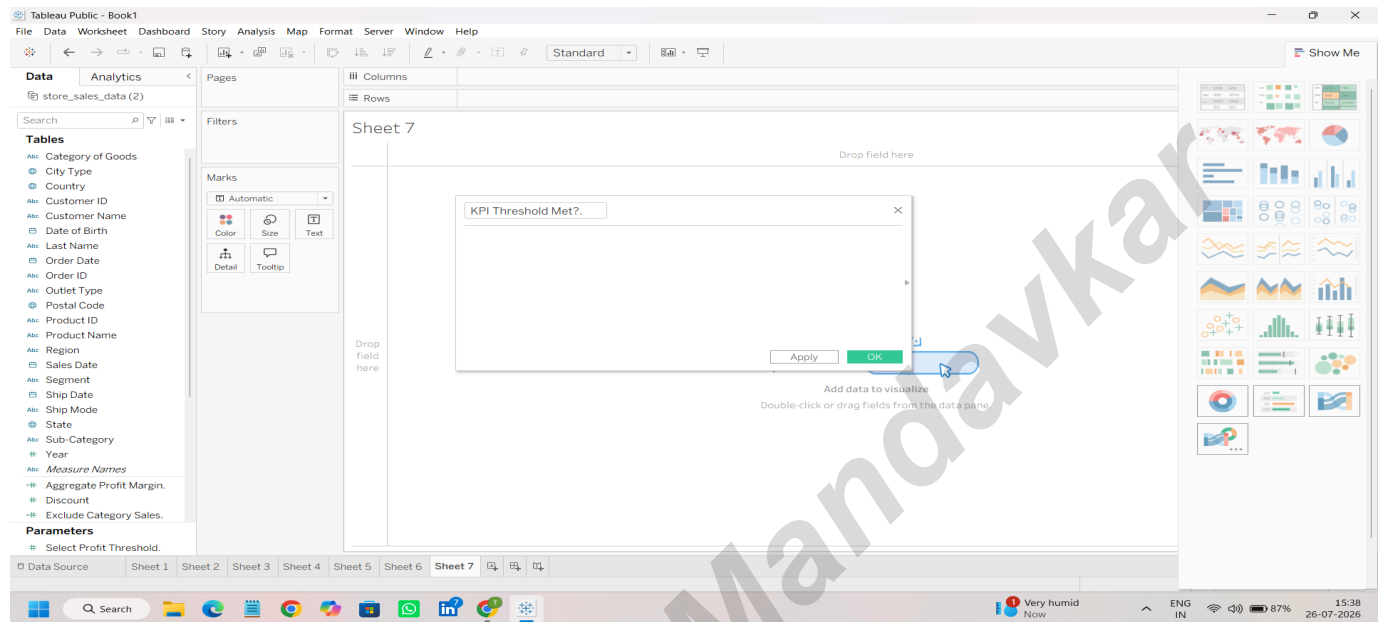

Name:- Chetan Mandavkar

Roll No. T093

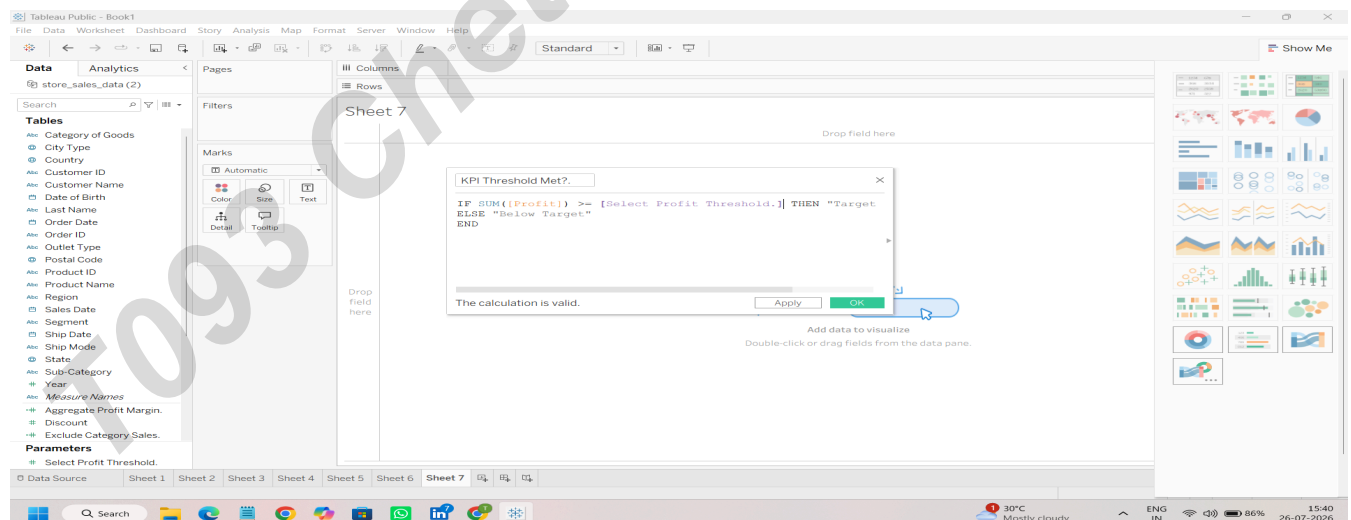

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 8:- Right-click in the blank white space of the Data Pane or Click on small triangle angle next to search bar and select Create Calculated Field... Name this field: KPI Threshold Met?

**Step 9:- Input the following logical IF-THEN conditional statement:
IF SUM([Profit]) >= [Select Profit Threshold] THEN "Target Achieved"
ELSE "Below Target" END**

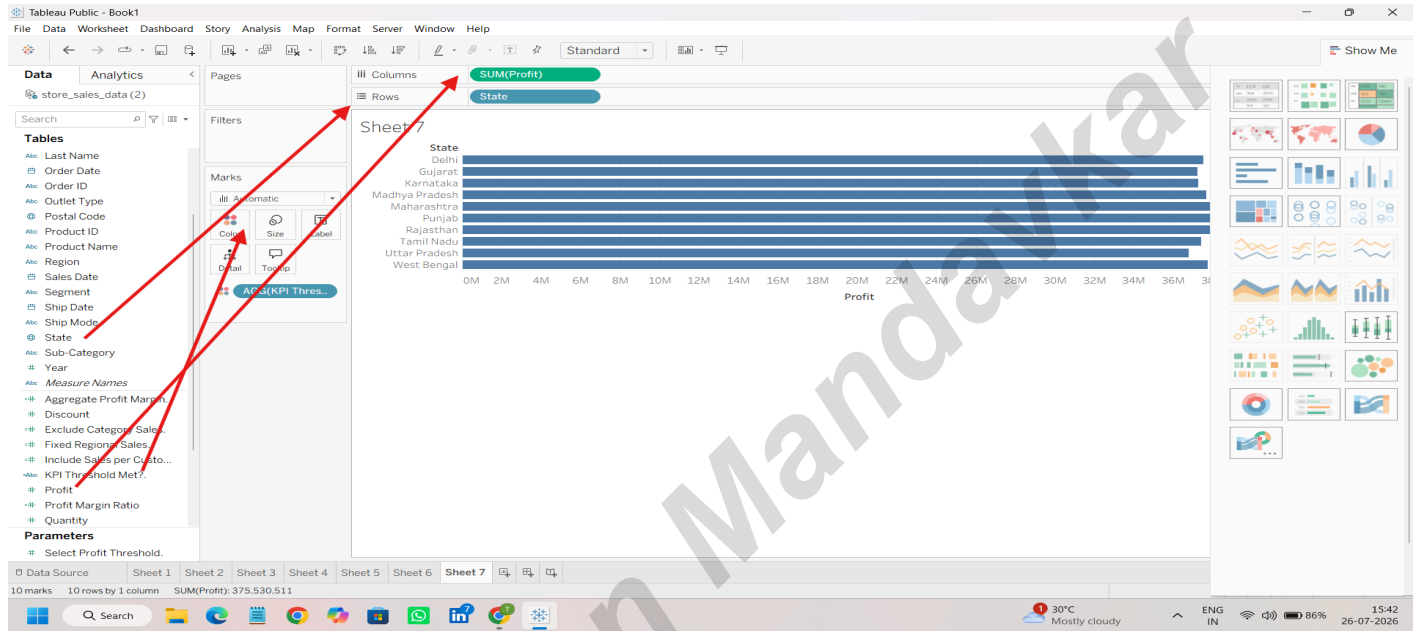

Name:- Chetan Mandavkar

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 10:- Open a new blank worksheet. Drag the State dimension from your Data Pane and drop it onto the Rows shelf. Drag the Profit measure and drop it onto the Columns shelf. Drag your newly created calculated field KPI Threshold Met? and drop it directly onto the Color tile in the Marks card.

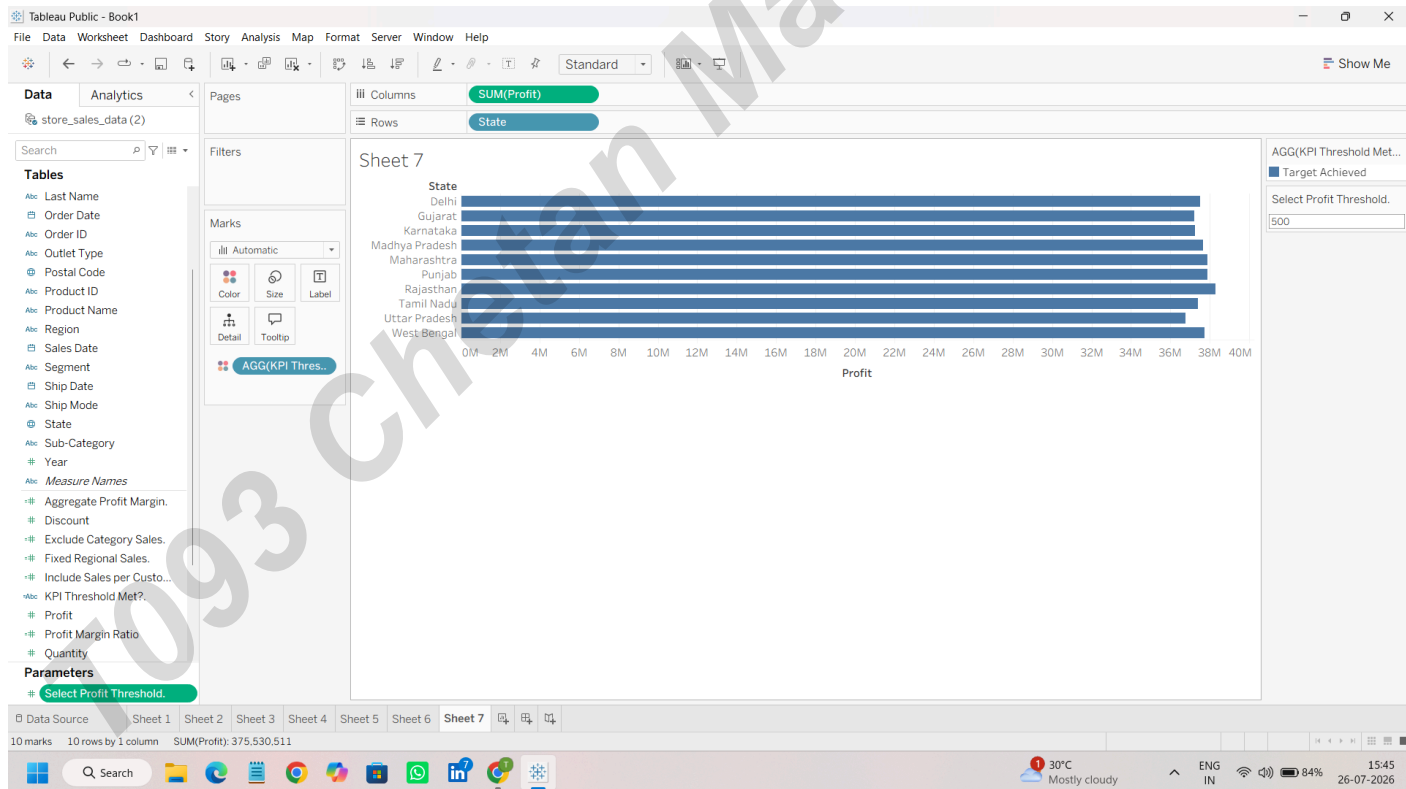

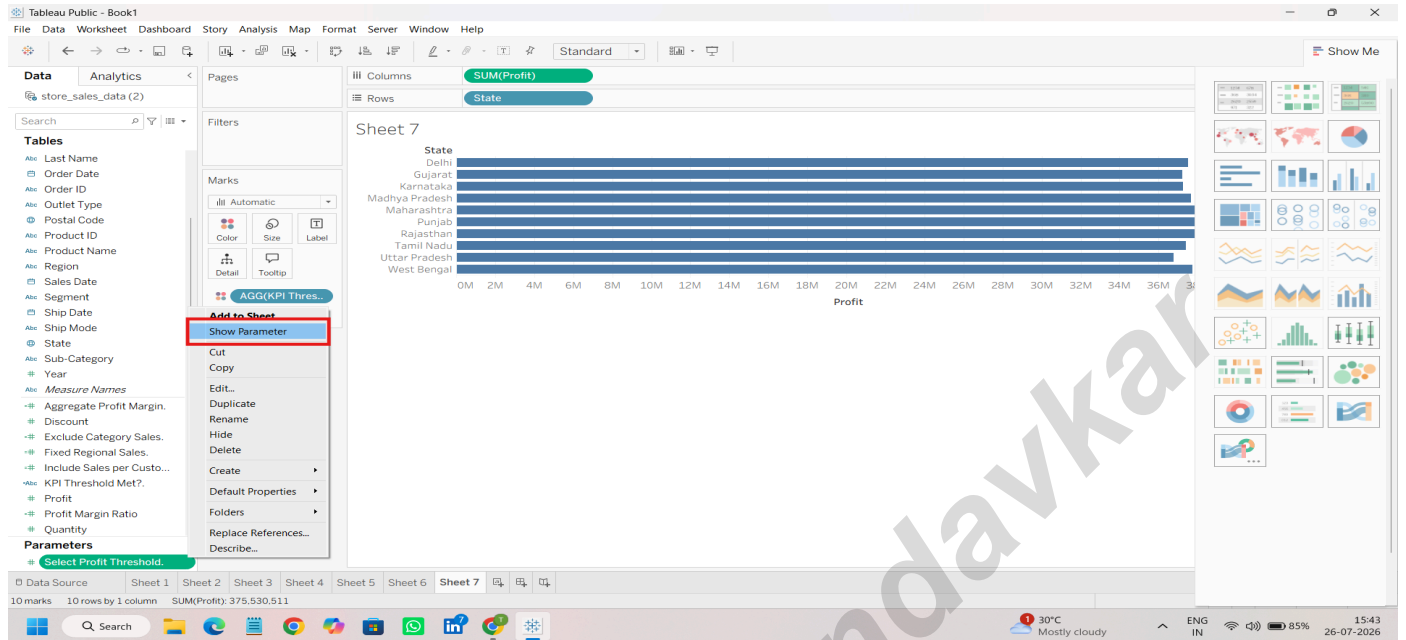

Step 11:- Show the Parameter Control: Go down to the very bottom of the Data Pane under the Parameters header section. Right-click on your Select Profit Threshold parameter block and choose Show Parameter Control.

Name:- Chetan Mandavkar

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

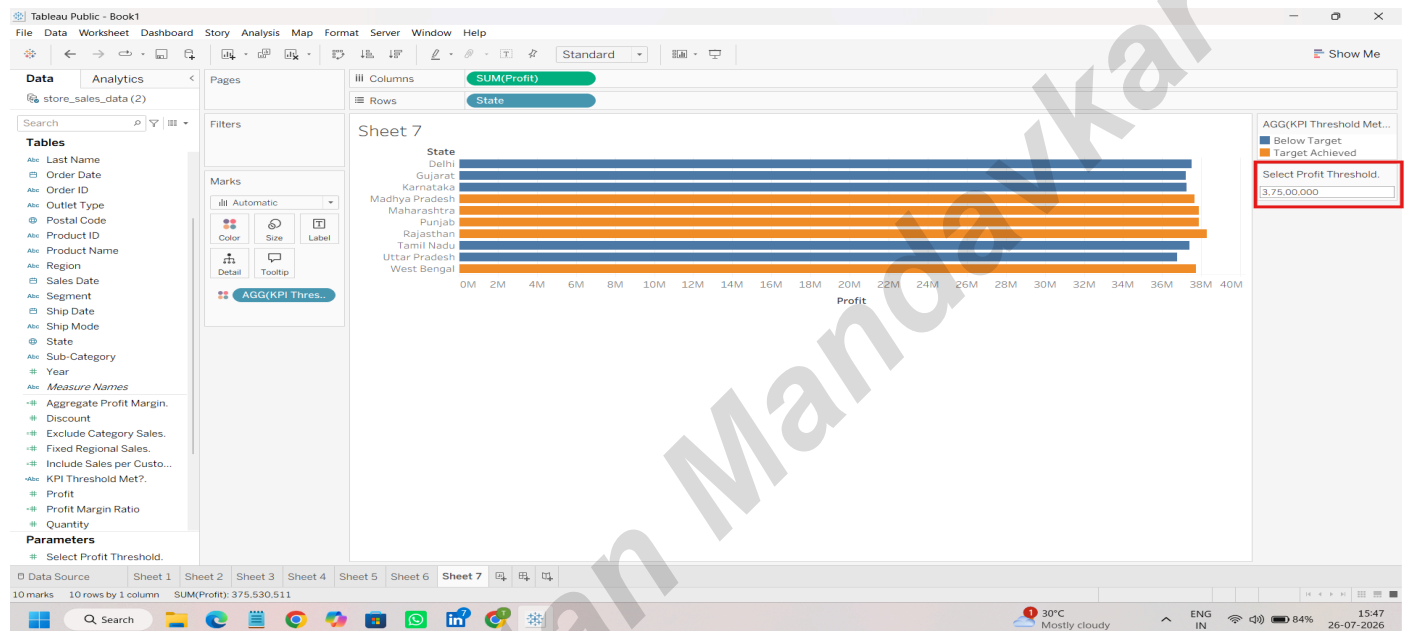

Name:- Chetan Mandavkar

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 12:- A text box slider will slide into the upper right corner of your sheet canvas view. Type a low value like 100 or a high value like 5000 into that parameter box and hit Enter (NOTE: This is subjective to dataset in our case we typed 3,75,00,000 and the color changed instantly). The bars will instantly change color dynamically as states cross above or below the threshold you typed!

G) Apply calculations to fix data issues and enhance insights

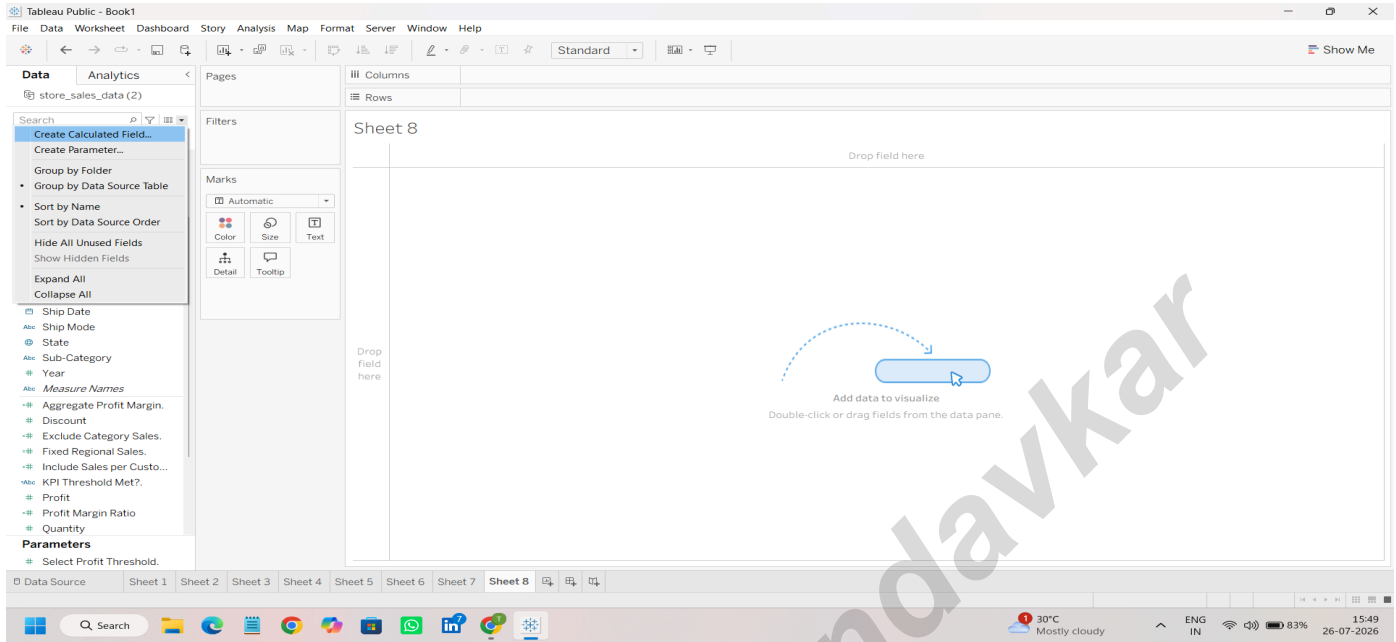

Step 1:- Right-click in the blank white space of your Data Pane and select Create Calculated Field...

Name:- Chetan Mandavkar

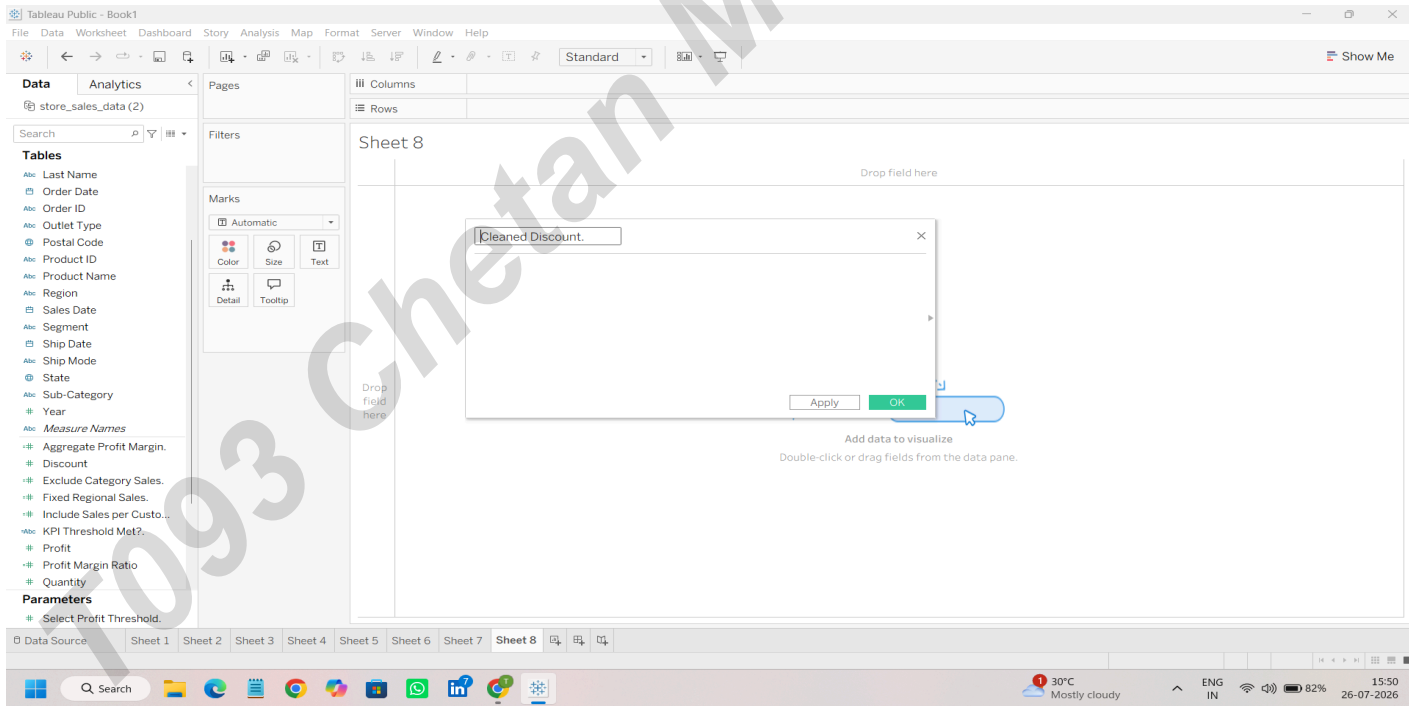

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 2:- Name the field: Cleaned Discount.

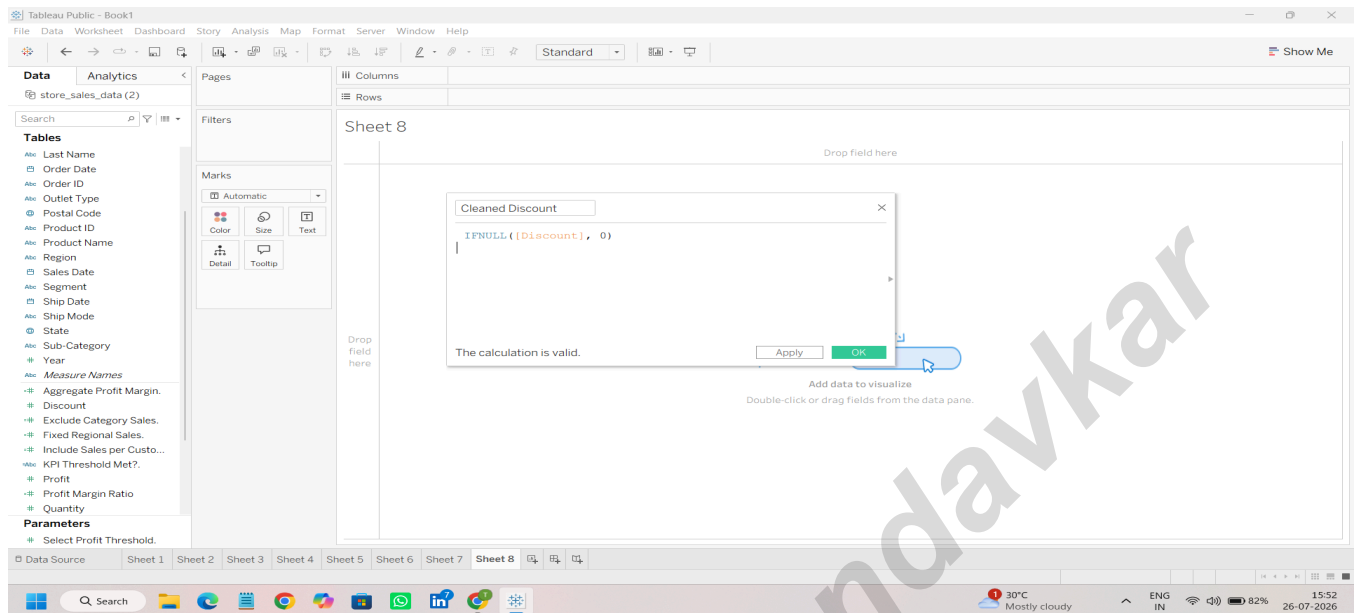

Name:- Chetan Mandavkar

Roll No. T093

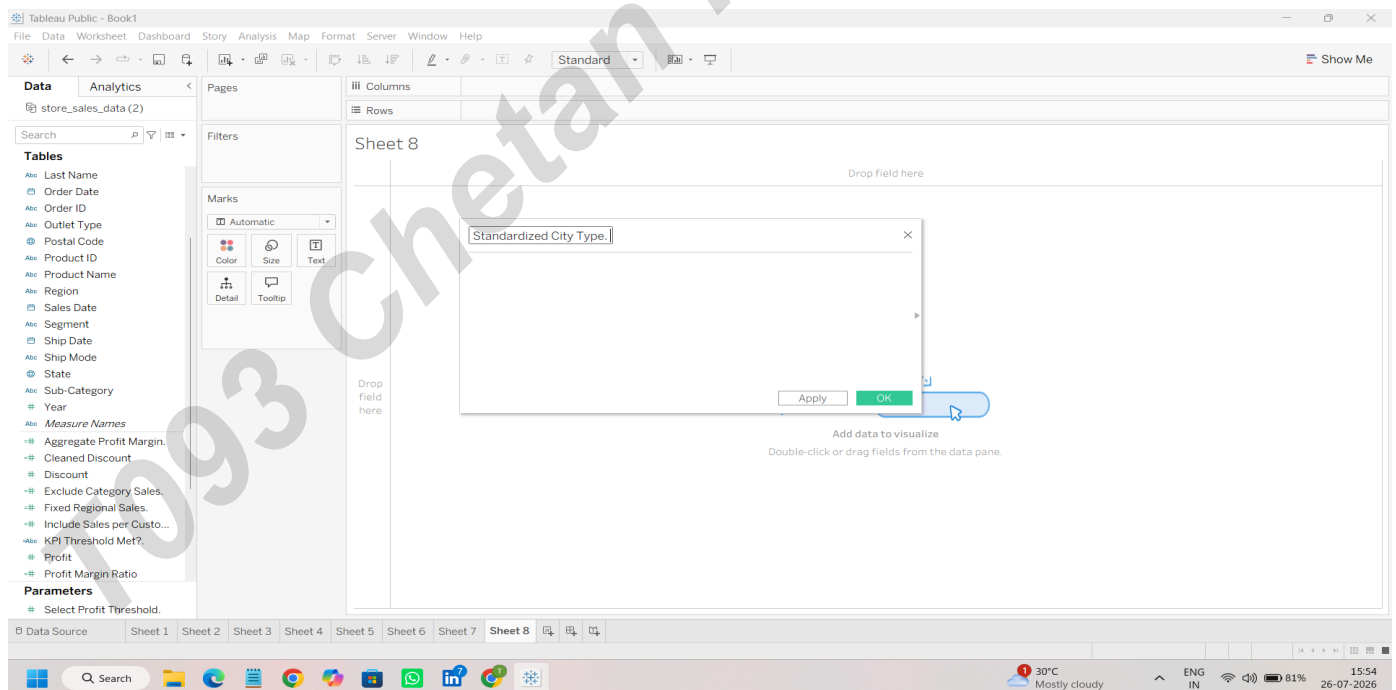

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 3:- Input the following expression: IFNULL([Discount], 0)

Step 4:- Create a new Calculated Field named Standardized City Type. Input the following text transformation expression: UPPER([City Type])

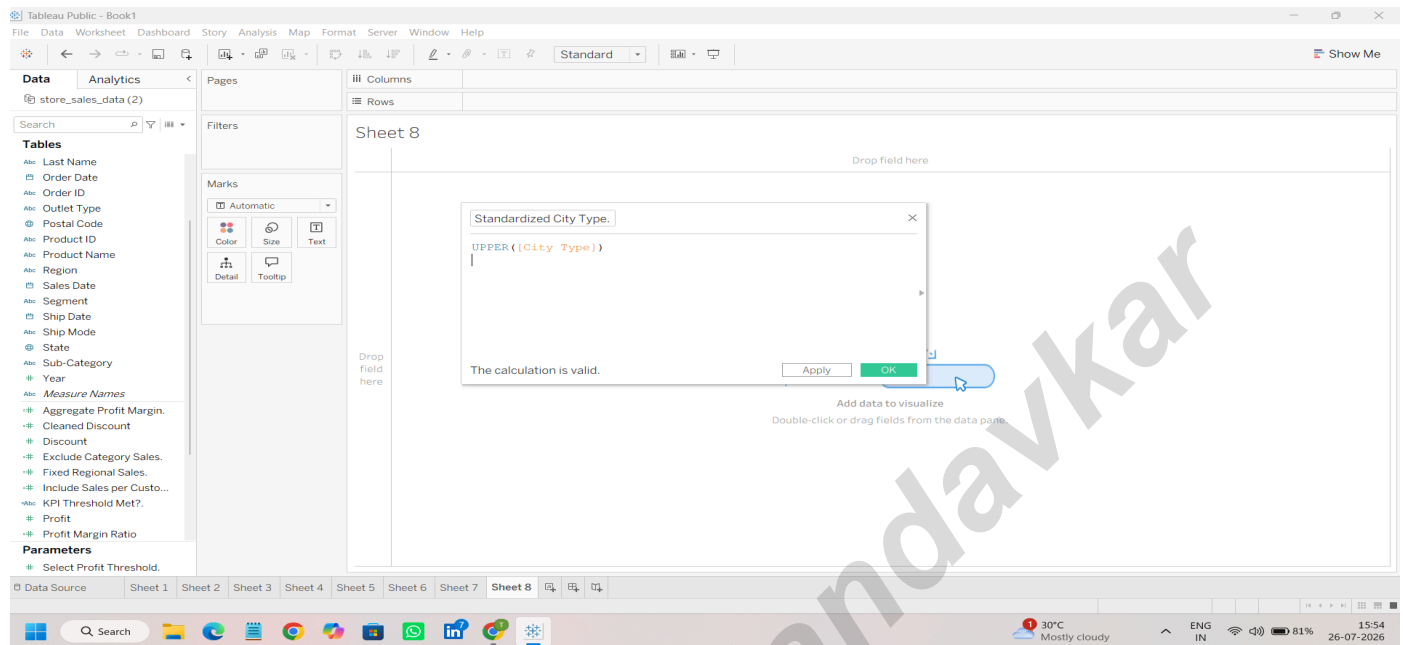

Name:- Chetan Mandavkar

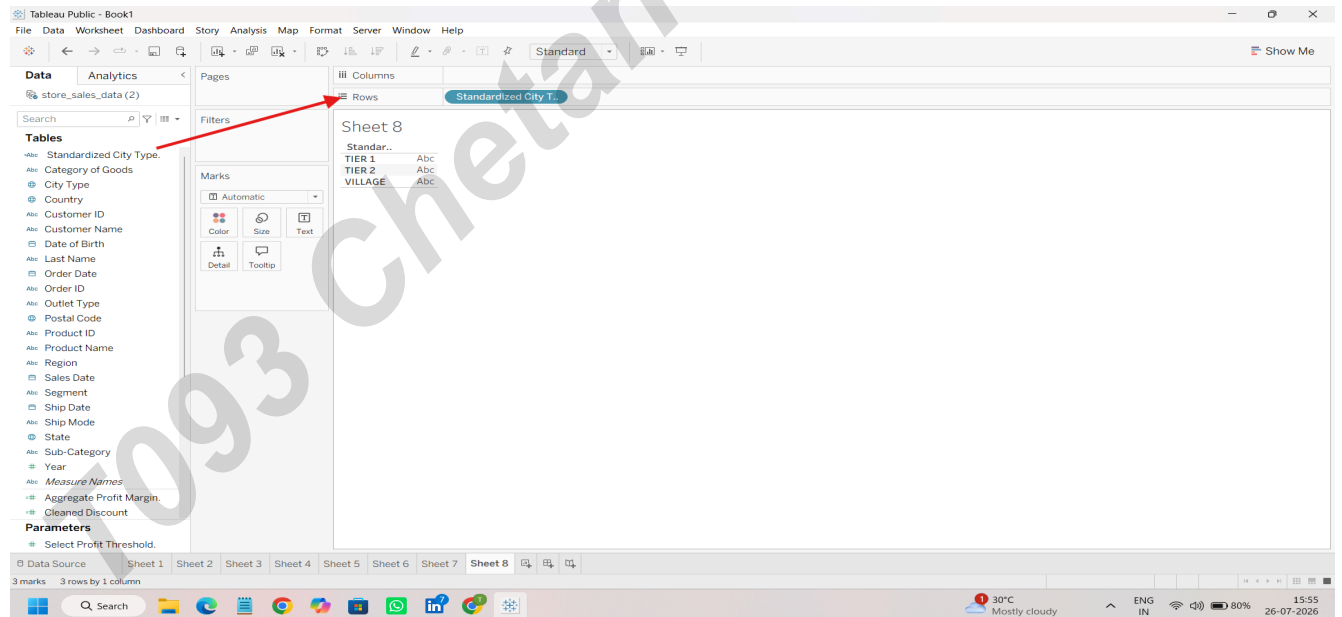

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 5:- Drag your newly created Standardized City Type dimension from the Data Pane and drop it onto the Rows shelf.

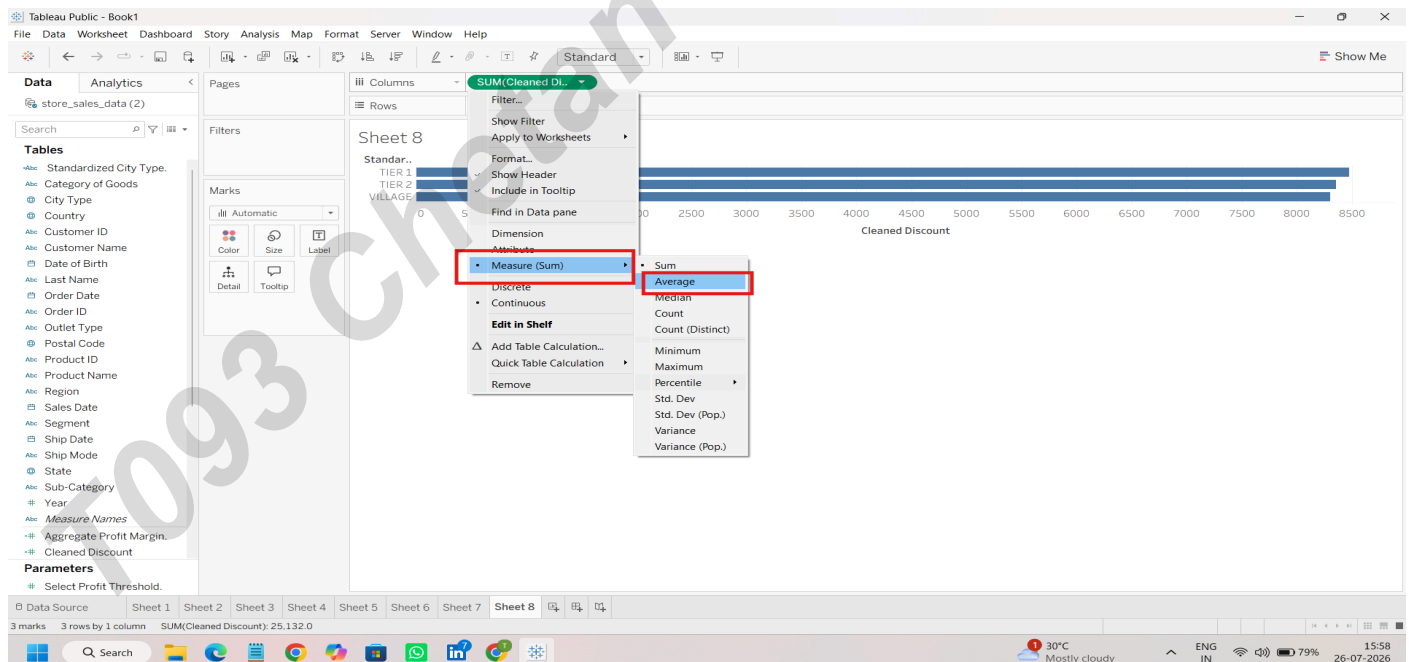

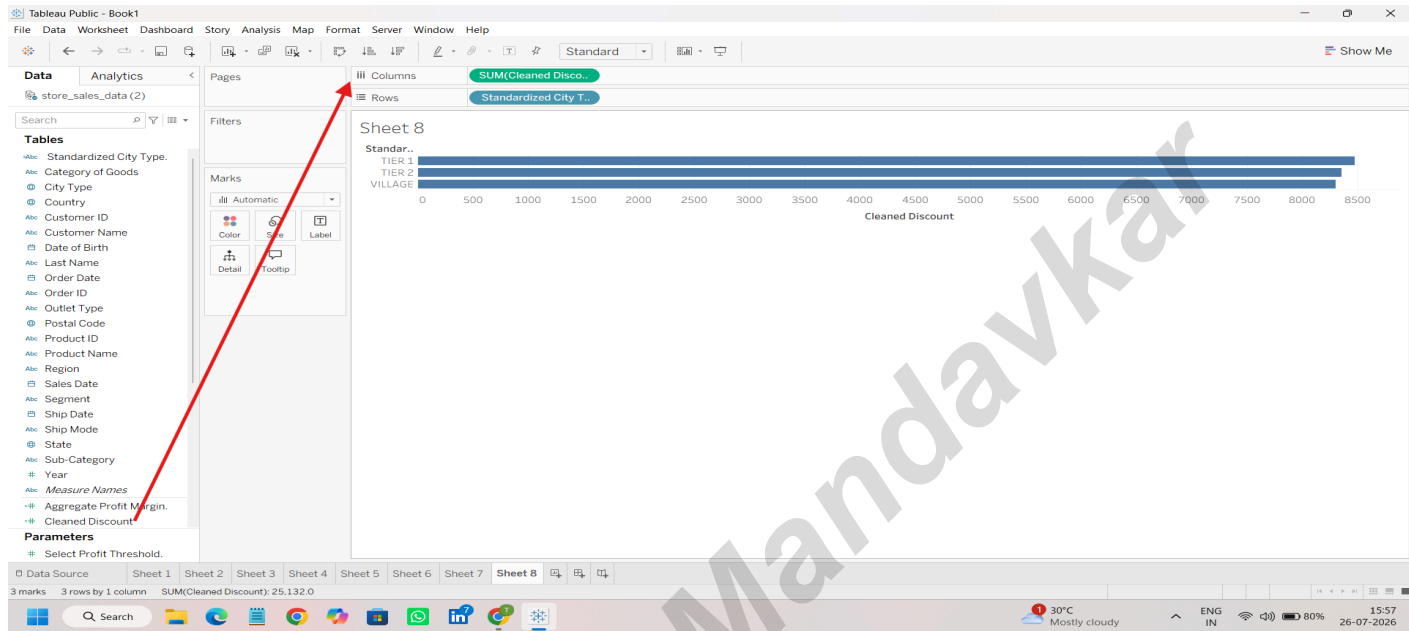

Name:- Chetan Mandavkar

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Step 6:- Drag the Cleaned Discount calculated field onto the Columns shelf. Change its aggregation from Sum to Average by right-clicking the pill.

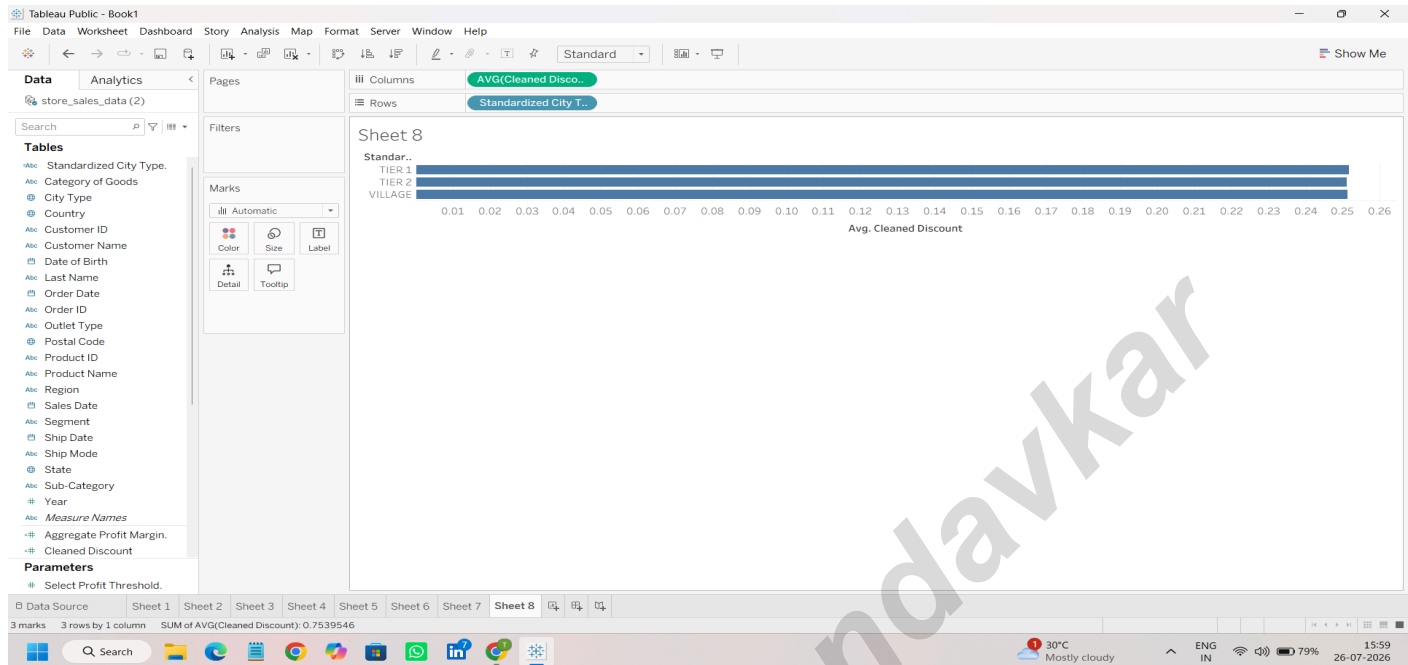

Name:- Chetan Mandavkar

Roll No. T093

Subject:- Data Visualization With Power BI And Tableau

Sheth L.U.J. And Sir M.V. College

Name:- Chetan Mandavkar

Roll No. T093
